Chaotic Dynamics Of Sea Clutter:

Chaotic Dynamics of Sea Clutter Simon S. Haykin, Puthusserypady, Sadasivan, McMaster University. Communications Research Laboratory, 1997 *Chaotic Dynamics of Sea Clutter* Simon Haykin, Sadasivan Puthusserypady, 1999-08-02 Chaotic dynamics of sea clutter boasts important applications in a number of fields including weather radar systems which are intensely studied at major universities This book presents a detailed account of chaotic dynamics of sea clutter using real life sea clutter data rather than simulated data and drawing on eight years of research by one of the most highly regarded researchers in this area

Adaptive Radar Signal Processing Simon Haykin, 2006-11-10 This collaborative work presents the results of over twenty years of pioneering research by Professor Simon Haykin and his colleagues dealing with the use of adaptive radar signal processing to account for the nonstationary nature of the environment These results have profound implications for defense related signal processing and remote sensing References are provided in each chapter guiding the reader to the original research on which this book is based

Kalman Filtering and Neural Networks Simon Haykin, 2004-03-24 State of the art coverage of Kalman filter methods for the design of neural networks This self contained book consists of seven chapters by expert contributors that discuss Kalman filtering as applied to the training and use of neural networks Although the traditional approach to the subject is almost always linear this book recognizes and deals with the fact that real problems are most often nonlinear The first chapter offers an introductory treatment of Kalman filters with an emphasis on basic Kalman filter theory Rauch Tung Striebel smoother and the extended Kalman filter Other chapters cover An algorithm for the training of feedforward and recurrent multilayered perceptrons based on the decoupled extended Kalman filter DEKF Applications of the DEKF learning algorithm to the study of image sequences and the dynamic reconstruction of chaotic processes The dual estimation problem Stochastic nonlinear dynamics the expectation maximization EM algorithm and the extended Kalman smoothing EKS algorithm The unscented Kalman filter Each chapter with the exception of the introduction includes illustrative applications of the learning algorithms described here some of which involve the use of simulated and real life data Kalman Filtering and Neural Networks serves as an expert resource for researchers in neural networks and nonlinear dynamical systems

Electromagnetic Scattering from Random Media Timothy R. Field, 2008-12-18 The book develops the dynamical theory of scattering from random media from first principles Its key findings are to characterize the time evolution of the scattered field in terms of stochastic differential equations and to illustrate this framework in simulation and experimental data analysis The physical models contain all correlation information and higher order statistics which enables radar and laser scattering experiments to be interpreted An emphasis is placed on the statistical character of the instantaneous fluctuations as opposed to ensemble average properties This leads to various means for detection which have important consequences in radar signal processing and statistical optics The book is also significant also because it illustrates how ideas in mathematical finance can be applied to physics problems in which

non Gaussian noise processes play an essential role This pioneering book represents a significant advance in this field and should prove valuable to leading edge researchers and practitioners at the postgraduate level and above Radar 97 ,1997 This volume contains the 178 papers that were presented at the International Conference on RADAR in 1997

Experimental Chaos Visarath In,2003-09-04 Electronics optics and fluids have been strong fields for the application of nonlinear dynamics The trend over the years has been the growth of biophysics especially neuroscience and cardiac dynamics oceanography and geophysics for the employment of the concepts and techniques of nonlinear dynamics Topics include electronics optics geophysics oceanography and meteorology hydrodynamics turbulence and plasmas biophysics neurophysiology chemical chaos interdisciplinary as well as data analysis *IGARSS.* ,1998 **IJCNN'99** IEEE Neural Networks Council,1999 IJCNN 99 spans the neural network field from neurons to consciousness training algorithms to robotics chaos to control fuzzy logic to evolutionary computing Starting with a symposium on biological neural networks it explores the potential impact of neurobiological discoveries **Conference Proceedings** ,1991 *Oceans '91* ,1991

Radar 2002 ,2002 A collection of the papers given at the RADAR Conference held in 2002 Model-Based Signal Processing James V. Candy,2006 Model Based Signal Processing develops the model based approach to signal processing for a variety of useful model sets including the popularly termed physics based models It presents a unique viewpoint of signal processing from the model based perspective **Neural Computation** ,2000 **Proceedings** ,2000 Adaptive Signal Processing Simon S. Haykin,1991 Earth Science James A. Woodhead,2001 Presents cross referenced essays on basic topics related to planetology and Earth from space each essay includes an annotated bibliography *Unervised Adaptive Filtering, Blind Source Separation* Simon Haykin,2000-04-14 A complete one stop reference on the state of the art of unsupervised adaptive filtering While unsupervised adaptive filtering has its roots in the 1960s more recent advances in signal processing information theory imaging and remote sensing have made this a hot area for research in several diverse fields This book brings together cutting edge information previously available only in disparate papers and articles presenting a thorough and integrated treatment of the two major classes of algorithms used in the field namely blind signal separation and blind channel equalization algorithms Divided into two volumes for ease of presentation this important work shows how these algorithms although developed independently are closely related foundations of unsupervised adaptive filtering Through contributions by the foremost experts on the subject the book provides an up to date account of research findings explains the underlying theory and discusses potential applications in diverse fields More than 100 illustrations as well as case studies appendices and references further enhance this excellent resource Topics in Volume I include Neural and information theoretic approaches to blind signal separation Models concepts algorithms and performance of blind source separation Blind separation of delayed and convolved sources Blind deconvolution of multipath mixtures Applications of blind source separation Volume II Blind Deconvolution continues coverage with blind channel equalization and its relationship to

blind source separation *Oceans 2001 MTS/IEEE* ,2001 **Acoustic Echo and Noise Control** Eberhard

Hänsler, Gerhard Schmidt, 2004-05-27 In this book an international team of highly qualified experts treats important topics in acoustic echo and noise control and reports the latest developments Methods for enhancing the quality of speech signals are gaining growing attention in universities and in industrial development laboratories This book is organized in five parts Part I gives a short introduction to acoustic echo and noise control Part II deals with multi microphone processing In Part III advanced methods for both linear and nonlinear echo cancellation are presented and techniques for intelligent control of hands free telephones are introduced Part IV is devoted to noise reduction procedures An in depth treatment of conventional and of advanced methods is given followed by a model based approach using Kalman filters Finally in Part V selected applications of acoustic echo and noise control as well as speech and audio processing in general are outlined Topics such as auditory scene analysis wave field synthesis for spatial sound reproduction in car communication systems and hearing aids are treated
