

What are Porous Materials?

Non-porous solid

- Low specific surface area
- Low specific pore volume

Porous solid

- High specific surface area
- High specific pore volume

Characterization Of Porous Solids:

Characterization of Porous Solids and Powders: Surface Area, Pore Size and Density Seymour Lowell, Joan E. Shields, Martin A. Thomas, Matthias Thommes, 2006-04-24 The growth of interest in newly developed porous materials has prompted the writing of this book for those who have the need to make meaningful measurements without the benefit of years of experience One might consider this new book as the 4th edition of Powder Surface Area and Porosity Lowell the sections on mercury porosimetry and particularly chemisorption have been updated and greatly expanded

Thomas, Matthias Thommes, 2012-09-14 The growth of interest in newly developed porous materials has prompted the writing of this book for those who have the need to make meaningful measurements without the benefit of years of experience One might consider this new book as the 4th edition of Powder Surface Area and Porosity Lowell the sections on mercury porosimetry and particularly chemisorption have been updated and greatly expanded

Characterization of Porous Solids and Powders S Lowell, Joan E Shields, Martin A Thomas, 2004-09-15 This book gives a unique overview of principles associated with the characterization of solids with regard to their surface area pore size and density The book covers methods based on Gas Adsorption Physi and Chemisorption Mercury Porosimetry and Pycnometry Not only are the theoretical and experimental basics of these techniques described but also the most recent developments particularly in light of the tremendous progress made in recent years in Materials Science and Nanotechnology The application of classical theories and methods for pore size analysis are discussed in contrast with the most advanced microscopic theories based on statistical mechanics e g Density Functional Theory and Molecular Simulation The book will appeal both to students and to scientists in industry who are in need of accurate and comprehensive pore and surface area characterization of their materials

Characterization of Porous Solids and Powders, 2006 Characterization of Porous Solids III F. Rodríguez-Reinoso, Jean Rouquerol, KK Unger, Kenneth Sing, 1994-08-26 The objectives of the Third IUPAC Symposium on the Characterization of Porous Solids COPS III were 1 to provide the opportunity for specialists to exchange ideas and new information on theoretical principles and methodology and 2 to generate proposals for the comparison and utilization of the many techniques now available for the characterization of porous solids A successful outcome of the Symposium has been the final report of the IUPAC Subcommittee on Recommendations for the Characterization of Porous Solids a summary of which is given in these proceedings The edited papers included in the present volume have been selected from the 155 oral and poster presentations given at this symposium which attracted 200 participants from 28 different countries The following topics were discussed 1 Simulation and modelling of pore structures and pore filling mechanisms 2 Novel experimental techniques with particular reference to high resolution techniques 3 Model pore structures and reference materials 4 Porous materials of technological importance The wide range of materials and techniques described provide a useful and comprehensive reference source for

academic and industrial scientists and technologists *Characterization of Porous Solids II* KK Unger, F. Rodríguez-Reinoso, Jean Rouquerol, Kenneth Sing, 1991-04-19 The Second IUPAC Symposium on the Characterization of Porous Solids COPS II provided the opportunity for detailed discussion and appraisal of the most important techniques currently used for the characterization of porous materials especially those of technological importance The 82 selected papers and reviews contained in this volume are mainly concerned with the theoretical and experimental aspects of adsorption fluid penetration small angle scattering and spectroscopic methods with their application in the study of adsorbents catalysts constructional materials etc Particular attention is given to the characterization of carbons oxides zeolites clays cement and polymers The wide range of materials and techniques described in this book provide a useful and comprehensive reference source for academic and industrial scientists and technologists

Characterization of Porous Solids H. Kral, Jean Rouquerol, Kenneth Sing, KK Unger, 1988-04-01 The importance of porosity has long been recognized by scientists and engineers Porous solids are widely encountered in industry and everyday life and their behaviour e g chemical reactivity adsorptive capacity and catalytic activity is dependent on their pore structure A considerable amount of work on porous solids has been undertaken both in academic and in industrial laboratories However all this activity is in urgent need of a critical appraisal To undertake this task a number of leading experts in the field of adsorption porosimetry X ray and neutron scattering optical and electron microscopy calorimetry and fluid permeation were brought together at the 1987 IUPAC COPS I Symposium This proceedings volume provides an up to date overall review of the theoretical foundations for modelling and characterizing porous systems It deals with most of the techniques in current use as applied to both model systems and porous solids of industrial importance The reader will find the description and discussion of a number of novel techniques as well as a critical appraisal and comparison of the more established methods All those concerned with the characterization of porous solids in academic and industrial laboratories will find much to interest them in this volume It should be on the bookshelf of applied research centres involved in adsorption catalysis purification of gases and liquids pigments fillers building materials etc

Characterisation of Porous Solids VIII Stefan Kaskel, 2009 This book is the Proceedings of the 8th International Symposium on the Characterisation of Porous Solids The conference is one of a series held every three years which covers developments in methods for the characterisation of porous materials and applications of those methods COPS VIII is concerned with fundamental and applied research on the characterisation of the structure of porous materials and the relationship between structure and material performance The scope includes experimental characterisation methods such as X Ray diffraction NMR adsorption mercury intrusion and calorimetry theoretical and simulation methods used to interpret experimental data such as molecular simulation classical and statistical mechanical theory and pore network modelling and applied research on the impact of measured material properties on performance in applications This book will appeal to both academics and commercial researchers
