**The Emergence of the Irish Banking System, 1820-1845** G. L. Barrow, 1975     *The Future of Central Banking* Forrest Capie, 1994 This volume contains two major papers prepared for the Bank of England's Tercentenary Symposium in June 1994. The first by Forrest Capie, Charles Goodhart and Norbert Schnadt provides an authoritative account of the evolution of central banking. It traces the development of both the monetary and financial stability concerns of central banks and includes individual sections on the evolution and constitutional positions of 31 central banks from around the world. The second paper by Stanley Fischer explores the major policy dilemmas now facing central bankers: the extent to which there is a short-term trade-off between inflation and growth; the choice of inflation targets and the choice of operating procedures. Important contributions by leading central bankers from around the world and the related Per Jacobsen lecture by Alexander Lamfalussy are also included in the volume.     *Bank Architecture in Dublin* Michael O'Neill, 2011 This book, commissioned as an action of the Dublin City Heritage Plan, opens with an historical introduction to 18th and 19th century banking beginning with private banking concerns, the emergence of the Bank of Ireland and the arrival of large joint stock companies. The architecture of the impressive head office buildings and their sumptuous banking halls are treated chronologically and thematically, tracing Italianate and later Ruskinian Gothic influences, cash office arrangements and the impact of politics reflected in building materials and sculptural decoration. The spread of bank branch architecture away from the core around College Green is traced throughout the city and the emerging suburbs up to the arrival of avant-garde architecture. An appendix on documentary sources for further research and a pictorial architectural synopsis conclude this study.
