Cogeneration And District Heating An Energy Efficiency Partnership:

Cogeneration and District Heating Roy Meador,1981 District Heating and Cooling Networks Antonio Colmenar Santos,2020-05-12 Conventional thermal power generating plants reject a large amount of energy every year If this rejected heat were to be used through district heating networks given prior energy valorisation there would be a noticeable decrease in the amount of fossil fuels imported for heating As a consequence benefits would be experienced in the form of an increase in energy efficiency an improvement in energy security and a minimisation of emitted greenhouse gases Given that heat demand is not expected to decrease significantly in the medium term district heating networks show the greatest potential for the development of cogeneration Due to their cost competitiveness flexibility in terms of the ability to use renewable energy resources such as geothermal or solar thermal and fossil fuels more specifically the residual heat from combustion and the fact that in some cases losses to a country region s energy balance can be easily integrated into district heating networks which would not be the case in a fully electric future district heating and cooling networks and cogeneration could become a key element for a future with greater energy security while being more sustainable if appropriate measures were implemented This book therefore seeks to propose an energy strategy for a number of cities regions countries by proposing appropriate measures supported by detailed case studies *New Technical Books* New York Public Library,1982

Thermal Energy Yatish T. Shah,2018-01-12 The book details sources of thermal energy methods of capture and applications It describes the basics of thermal energy including measuring thermal energy laws of thermodynamics that govern its use and transformation modes of thermal energy conventional processes devices and materials and the methods by which it is transferred It covers 8 sources of thermal energy combustion fusion solar fission nuclear geothermal microwave plasma waste heat and thermal energy storage In each case the methods of production and capture and its uses are described in detail It also discusses novel processes and devices used to improve transfer and transformation processes
