cognition and behavior **Functional Accounts of Emotion** James J. Gross, Dacher Keltner, 1999 In recent years emotion researchers have paid increasing attention to the functions that emotions service This attention to function has been apparent in many disciplines and at many levels of analysis From the most basic physiological symptom to the most overarching social structure the effects of emotion both on the emotional person and on others are being recognized The knowledge that has accumulated is substantial but is scattered among a variety of fields and literatures This special issue summarizes the functional approach to emotion The six articles that have been selected concentrate on the work of psychologists but include many of the other fields that have contributed to what is truly a multidisciplinary approach The special issue opens with three foundational articles that discuss a the intrapersonal functions of emotions b the social functions of emotions and c the developmental functions of emotions The next three articles focus on challenges to traditional functional accounts of emotions These articles consider d emotion regulation e emotions and psychopathology and e negative affect and health Attention, Representation, and Human Performance Slim Masmoudi, David Yun Dai, Abdelmajid Naceur, 2012 This volume presents a rare occasion where scholars from Europe North Africa and North America share their research programs and findings revolving around an important theme integration Despite different research foci and methodologies there is a strong consensus that we need to understand a psychological phenomenon in all its complexity involving its neural psychological and social dimensions involving perception and conception and decision processes involving motivation emotion and cognition all in complex interaction This volume is intended to reach out to basic and applied psychological researchers cognitive and affective scientists learning scientists biologists sociologists neuropsychological researchers and philosophers who have an interest in an integrated understanding of the mind at work particularly pertaining to explanations of real life phenomena that have social and practical significance A distinct feature of this volume is that most research involved is heavily built on neuropsychological evidence while loyal to the experimental tradition with its focus on functional behavior in various situations and conditions that mimic or resemble real life The viability of this approach to doing cutting edge research that is relevant and applicable to many real life phenomena should also make this body of research useful for a wide range of human endeavor from religion education to industrial and organizational psychology , Cognition, Emotion and Psychopathology Jenny Yiend, 2004-10-14 An account of the cognitive clinical literature sets the agenda for future research **Cognition, Emotion, and Aesthetics in Contemporary Serial Television** Ted Nannicelli, Héctor J. others What is it about the particularities of serial television form and style in conjunction with our common cognitive emotional and aesthetic capacities that accounts for serial television's cognitive socio-political and aesthetic value and its current ubiquity in popular culture This book will appeal to postgraduates and scholars working in television studies as well as film studies cognitive media theory media psychology and the philosophy of art Exploring the Musical Mind John Sloboda, 2005 Brings together in one volume important material from various hard to locate sources giving the reader access to a body of work from one of the founders of music psychology Complements and updates Sloboda's *The musical mind*

factors including socialization and situational influences on altruism **Emotional States, Attention, and Working Memory** Nazanin Derakhshan, Michael Eysenck, 2013-05-13 This Special Issue is concerned with the effects of three emotional states positive affect anxiety and depression on performance More specifically the contributors focus on the potential mediating effects of attention and of executive processes of working memory The evidence discussed suggests that anxiety and depression both impair the executive functions of shifting and inhibition in part due to task irrelevant processing e g rumination worry In contrast positive affect seems to enhance the shifting function and does not impair the inhibition function The complicating role of motivational intensity is also discussed as are implications for future research
