

## Cognition and Tool Use

---

BETH PRESTON

**Abstract:** Tool use rivals language as an important domain of cognitive phenomena, and so as a source of insight into the nature of cognition in general. But the favoured current definition of tool use is inadequate because it does not carve the phenomena of interest at the joints. Heidegger's notion of equipment provides a more adequate theoretical framework. But Heidegger's account leads directly to a non-individualist view of the nature of cognition. Thus non-individualism is supported by concrete considerations about the nature of tools and tool use.

### 1. Introduction

Language has received a great deal of attention from philosophers in this century in both the Anglo-American and the Continental traditions. There is no comparable philosophical literature on artefacts or tools.<sup>1</sup> This should be surprising, if only because the pervasively linguistic nature of our everyday human environment is rivalled only by its pervasive artefactuality. But why should tools and other artefacts matter to philosophy? For the same reason language matters. As Ian Hacking puts it:

*It matters for the reason that ideas mattered in seventeenth-century philosophy, because ideas then, and sentences now, serve as the interface between the knowing subject and what is known. (Hacking, 1975, p. 187; emphasis in original)*

Too many people have made helpful comments on this paper for me to thank them all individually. However, two people—Dorothy Frigaszy and Paul Graves-Brown—deserve special thanks for the time and effort they have expended introducing me to the relevant literature in their respective fields. Earlier versions of this paper were presented at the Third In-House Conference of the Center for Philosophy of Science at the University of Pittsburgh, and at the 1995 meeting of the Society for Philosophy and Psychology. Address for correspondence: Philosophy Department, University of Georgia, Athens, GA 30602-1627, USA. Email: epreston@ai.uga.edu.

<sup>1</sup> I recently discovered startling evidence of this, as a result of my department's acquisition of *The Philosopher's Index* on CD-ROM. There are 15,736 entries under the subject heading 'language' as of this writing. Under 'tool' there are 28, and another 94 under 'artifact'. This lacuna is also noted by Dipert, 1993, who points out that it is apparent from the beginning in the annals of Western thought, and discusses some possible reasons for it.

*Cognition and Tool Use* Charles M. Keller, Janet Dixon Keller, 1996-09-28 Anthropologists Janet and Charles Keller provide an account of human accomplishment based on ethnographic study Blacksmithing the transformation of glowing iron into artistic and utilitarian products is the activity they chose to develop a study of situated learning This domain permeated by visual imagery and physical virtuosity rather than verbal logic appears antithetical to the usual realms of cognitive study For this reason it provides a new entree to human thought and an empirical test for an anthropology of knowledge Cognition and Tool Use Christopher Baber, 2003-07-24 The ability to use tools is a distinguishing feature of human beings It represents a complex psychomotor activity that we are only now beginning to comprehend Robust new theoretical accounts allow us to better understand how people use tools and explain differences in human and animal tool use from the perspective of cognitive science Our understanding needs to be grounded upon research into how people use tools which draws upon many disciplines from ergonomics to anthropology to cognitive science to neuropsychology *Cognition and Tool Use* Forms of Engagement in Human and Animal Use of Tools presents a single coherent account of human tool use as a complex psychomotor activity It explains how people use tools and how this activity can succeed or fail then describes the design and development of usable tools This book considers contemporary tool use in domains such as surgery and considers future developments in human computer interfaces such as haptic virtual reality and tangible user interfaces No other single text brings together the research from the different disciplines ranging from archaeology and anthropology to psychology and ergonomics which contribute to this topic Graduate students professionals and researchers will find this guide to be invaluable *Tool Use and Causal Cognition* Teresa McCormack, Christoph Hoerl, Stephen Butterfill, 2011-08-25 What cognitive abilities underpin the use of tools and how are tools and their properties represented or understood by tool users Does the study of tool use provide us with a unique or distinctive source of information about the causal cognition of tool users Tool use is a topic of major interest to all those interested in animal cognition because it implies that the animal has knowledge of the relationship between objects and their effects There are countless examples of animals developing tools to achieve some goal chimps sharpening sticks to use as spears bonobos using sticks to fish for termites and New Caledonian crows developing complex tools to extract insects from logs Studies of tool use have been used to examine an exceptionally wide range of aspects of cognition such as planning problem solving and insight naive physics social relationship between action and perception A key debate in recent research on animal cognition concerns the level of cognitive sophistication that is implied by animal tool use and developmental psychologists have been addressing related questions regarding the processes through which children acquire the ability to use tools In neuropsychology patterns of impairments in tool use due to brain damage and studies of neural changes associated with tool use have also led to debates about the different types of cognitive abilities that might underpin tool use and about how tool use may change the way space or the body is represented

Tool Use and Causal Cognition provides a new interdisciplinary perspective on these issues with contributions from leading psychologists studying tool use and philosophers providing new analyses of the nature of causal understanding A ground breaking volume which covers several disciplines this volume will be of interest to psychologists including animal researchers and developmental psychologists as well as philosophers and neuroscientists **Tool Use in Animals** Crickette M. Sanz,Josep Call,Christophe Boesch,2013-03-07 Presentation of groundbreaking research on an extensive range of tool using animals looking particularly at the evolution of cognitive abilities Tool Use in Animals Crickette Marie Sanz,Josep Call,Christophe Boesch,2013 The last decade has witnessed remarkable discoveries and advances in our understanding of the tool using behaviour of animals Wild populations of capuchin monkeys have been observed to crack open nuts with stone tools similar to the skills of chimpanzees and humans Corvids have been observed to use and make tools that rival in complexity the behaviours exhibited by the great apes Excavations of the nut cracking sites of chimpanzees have been dated to around 4 5 thousand years ago Tool Use in Animals collates these and many more contributions by leading scholars in psychology biology and anthropology along with supplementary online materials into a comprehensive assessment of the cognitive abilities and environmental forces shaping these behaviours in taxa as distantly related as primates and corvids

**The cognitive and neural bases of human tool use** François Osiurak,Cristina Massen,2015-02-12 Humans are not unique in using tools But human tool use differs from that known to occur in nonhumans in being very frequent spontaneous and diversified So a fundamental issue is what are the cognitive and neural bases of human tool use This Research Topic of Frontiers provides a venue for leading researchers in the field of tool use to present original research papers integrative reviews or theoretical articles that further our understanding of this topic Articles address a wide range of issues including for instance the nature of the underlying representations e g conceptual sensorimotor the mechanisms supporting the incorporation of tools into body schema the link between imitation and tool use or the evolutionary origins of human tool use Articles are included from experimental psychology neuropsychology neuroimaging neurophysiology developmental psychology ethology comparative psychology and ergonomics The goal of this Research Topic of Frontiers is to provide a state of the art view of the field Tools, Language and Cognition in Human Evolution Kathleen Rita Gibson,Tim Ingold,1993 Looks at how humans have evolved complex behaviours such as language and culture The Tool Instinct François Osiurak,2020-04-14 Humans use countless tools and are constantly creating new ones We are so prone to materiality that the changes we implement in our environment could put our very survival at stake It has therefore become necessary to question the cognitive origins of this materiality The Tool Instinct examines this subject by diametrically setting aside the idea that tool use is limited to manual activity It proposes an original perspective that surpasses a great number of false beliefs regarding the relationship between humans and tools The author argues that the human tendency to create and use tools relies on our ability one that may be unique to our species to generate our own physical problems thereby resulting

in a reasoning that is directed towards our physical world

**Social and Cognitive Approaches to Interpersonal Communication** Susan R. Fussell, Roger J. Kreuz, 2014-02-25 Historically the social aspects of language use have been considered the domain of social psychology while the underlying psycholinguistic mechanisms have been the purview of cognitive psychology Recently it has become increasingly clear that these two dimensions are highly interrelated cognitive mechanisms underlying speech production and comprehension interact with social psychological factors such as beliefs about one's interlocutors and politeness norms and with the dynamics of the conversation itself to produce shared meaning This realization has led to an exciting body of research integrating the social and cognitive dimensions which has greatly increased our understanding of human language use Each chapter in this volume demonstrates how the theoretical approaches and research methods of social and cognitive psychology can be successfully interwoven to provide insight into one or more fundamental questions about the process of interpersonal communication The topics under investigation include the nature and role of speaker intentions in the communicative process the production and comprehension of indirect speech and figurative language perspective taking and conversational collaboration and the relationships between language cognition culture and social interaction The book will be of interest to all those who study interpersonal language use social and cognitive psychologists theoretical and applied linguists and communication researchers *Darwin's Unfinished Symphony* Kevin N. Lala, 2018-09-11 Humans possess an extraordinary capacity for culture from the arts and language to science and technology But how did the human mind and the uniquely human ability to devise and transmit culture evolve from its roots in animal behavior Darwin's Unfinished Symphony presents a captivating new theory of human cognitive evolution This compelling and accessible book reveals how culture is not just the magnificent end product of an evolutionary process that produced a species unlike all others it is also the key driving force behind that process Kevin N Lala tells the story of the painstaking fieldwork the key experiments the false leads and the stunning scientific breakthroughs that led to this new understanding of how culture transformed human evolution It is the story of how Darwin's intellectual descendants picked up where he left off and took up the challenge of providing a scientific account of the evolution of the human mind
