Cognition Information Processing And Psychophysics Basic Issues:

Cognition, Information Processing, and Psychophysics Hans-Georg Geissler, Stephen W. Link, James T.

Townsend, 2013-04-15 The plan for this volume emerged during the international Leipzig conference commemorating the centenary of the death of Gustav Fechner. The contributors suggested that while many features of modern psychological theory were anticipated by Fechner, many new theoretical approaches owe much more to him than often is realized. As such, they decided to honor Fechner by evaluating his own contribution to the founding of psychology and psychoanalysis by deepening the foundations of psychological theories of consciousness, perception, and choice, and by using the analysis of time to create a new appreciation of constraints that bind mental processes together. Thus, this volume spans an extraordinary range of psychological topics from hermeneutics to the time quantum basis for mental processes in a way that would both amaze and delight Fechner. Moreover, the international reach of his pioneering ideas can be seen from the current locations of the contributors. The span from Japan to the United States to Holland to Germany and to Israel provides a global measure of Fechner's scientific legacy.

Classification and Cognition William K. Estes, 1994-01-06 Based on Estes' important Fitts Lectures, this volume details a set of psychological concepts and principles that offers a unified interpretation of a wide variety of memory, categorization, and decision-making phenomena. These phenomena are explained via two families of models established by the author: a storage-retrieval model and an adaptive network model. Estes considers whether the models are competing or complementary, offering cogent and instructive arguments for both perspectives. Estes' theory is then applied to two large-scale series of studies on category learning and recognition, providing an integrated understanding of seemingly disparate phenomena. This book is the culmination of the author's more than ten years of research in the field and stands as a great achievement by one of this century's eminent psychologists. It will be indispensable to a wide variety of behavioral scientists, including mathematical and cognitive psychologists.

Scientific Approaches to Consciousness Jonathan D. Cohen, Jonathan W. Schooler, 2014-04-04 There are many ways to approach the understanding of consciousness. Questions about these ways have occupied philosophers and metaphysicians for centuries. During the early growth of cognitive science, the problem of consciousness remained taboo, but an increasing number of studies have either implicitly or explicitly begun to bear on its nature. These have been inspired by a number of different original questions and focus on a variety of different empirical phenomena. Thus, studies of implicit memory, subliminal processing, strategic versus automatic processing, allocation of attention, and differences between information processes in the awake versus dreaming state all share a common assumption of a particular quality or state of awareness: alertness, namely, consciousness, that somehow can be distinguished from another type of state or states in which the subject is not aware of the information being processed. What distinguishes the cognitive psychological and cognitive neuroscience approach to the question of consciousness from that of philosophy and metaphysics is scientific methodology: a set of tools that permit the empirical study of a phenomenon.

in an objective and reproducible way Recent developments in both the empirical and theoretical methodologies of these fields have made it possible to begin to study the phenomenon associated with if not directly underlying consciousness in a scientific fashion This volume tries to resolve the difficulties associated with the scientific investigation of consciousness The intent is to explore the extent to which consciousness can be the target of direct scientific inquiry to get on the table some of the relevant work and consider the degree to which this research can help inform our understanding of consciousness It brings together a group of cognitive and neuroscientists to share relevant recent research in the fields of cognitive science and neuroscience and to determine whether any new strategies for the scientific pursuit of this question can be developed A long term goal is the development of a unified understanding of consciousness scientific as well as philosophical perspectives This volume takes the first step toward building the necessary local bridges [Stevens' Handbook of Experimental Psychology and Cognitive Neuroscience, Methodology](#) ,2018-03-13 V Methodology E J Wagenmakers Volume Editor Topics covered include methods and models in categorization cultural consensus theory network models for clinical psychology response time modeling analyzing neural time series data models and methods for reinforcement learning convergent methods of memory research theories for discriminating signal from noise bayesian cognitive modeling mathematical modeling in cognition and cognitive neuroscience the stop signal paradigm hypothesis testing and statistical inference model comparison in psychology fmri neural recordings open science neural networks and neurocomputational modeling serial versus parallel processing methods in psychophysics [Encyclopedia of Human Memory](#) Annette Kujawski Taylor Ph.D.,2013-10-29 Providing clear comprehensible information for general readers this three volume A Z encyclopedia covers the major theories and findings associated with our understanding of human memory and some of the crippling disorders associated with memory malfunction This encyclopedia comprehensively addresses one of the most critical components of human intelligence memory Comprising approximately 500 A Z entries written by experts who have studied memory and its impacts the work defines complex terminology for lay readers and includes answers to the most common questions regarding human memory Readers will gain an understanding of the various psychological and physiological systems of memory such as short term or procedural memory comprehend the principles that underlie effective encoding storage and construction of memories and learn the truth about often misconceptualized conditions like amnesia or how our memories are stored in bits and pieces rather than linearly like a recorded tape or video This set is ideal for high school students writing term papers or studying for advanced examinations such as Advanced Placement AP in psychology The volumes also provide a breadth of information invaluable to family members friends and caretakers of individuals who suffer from various memory disorders including descriptions of major disorders explanations of specific memory deficits strategies for memory improvement and information on the parts of the brain that access and store memory as well as the types of tests used to assess memory loss Also included are biographies of key contributors to the field of cognitive psychology and to the area of memory in particular

Human Nature Explored George Mandler,1997 What exactly is human nature Are we correct in accepting ourselves as unchangeable determined by biology or is this idea an obstacle to our cognitive emotional and evolutionary development George Mandler explores these questions from a fresh evolutionary and social perspective He examines the burgeoning field of evolutionary psychology and suggests a mid course correction Topics are approached from a variety of backgrounds drawing on relevant literature and Mandler s own research He begins with what we know about evolution and gene expression then moves on to the complex phenomena of consciuosness and emotion The constraints of both nature and nurture are discussed as limiting forces on human development and natural selection is considered in the context of our social fabric which draws on both psychological and anthropological knowledge Mandler considers human difference particularly in regard to intelligence and gender and discusses the nature of human values including our need for morality and freedom The book concludes with an appraisal of human cognition and language
