Borlongan,2022-01-25 Atypical Cognitive Deficits in Developmental Disorders Sarah H. Broman,Jordan Grafman,2014-02-25 This volume is based on a conference held to examine what is known about cognitive behaviors and brain structure and function in three syndromes and to evaluate the usefulness of such models The goal of this endeavor is to add to the knowledge base of cognitive neuroscience within a developmental framework Most of what is known about the neurological basis of cognitive function in humans has been learned from studies of central nervous system trauma or disease in adults Certain neurodevelopmental disorders affect the central nervous system in unique ways by producing specific as opposed to generalized cognitive deficit Studies of these disorders using neurobiological and behavioral techniques can yield new insights into the localization of cognitive function and the developmental course of atypical cognitive profiles The focus of this book is a discussion of the multidisciplinary research findings from studies of autism and Williams and Turner syndromes The approaches methods techniques and findings reported are at the cutting edge of neuroscience research on complex behavior patterns and their neural substrates Each disorder is accompanied by some degree of general cognitive impairment or mental retardation Of greater interest are the atypical deficits in which a cognitive function is spared such as language in Williams syndrome or is disproportionately depressed as are spatial discrimination skills and visual motor coordination in Turner syndrome Drastically reduced or seemingly absent language capabilities and little interaction with other people characterize the core autism syndrome A comprehensive and critical discussion of appropriate statistical techniques is made vivid by examples given from studies of small groups or single subjects in neurolinguistics and related fields *Cognitive deficits in schizophrenia and other neuropsychiatric disorders: Convergence of preclinical and clinical evidence* Ales Stuchlik,Tomiki Sumiyoshi,2015-10-23 Neuropsychiatric diseases such as schizophrenia Alzheimer s disease and etc represent a serious medical and socioeconomic problems These diseases are often accompanied by impairments of cognitive function e g abstract thinking decision making attention and several types of memory Such deficits significantly disrupt quality of life and daily functioning of patients Cognitive deficits in neuropsychiatric diseases are associated with alterations of brain morphology and function and are often resistant to therapeutic interventions In schizophrenia and related disorders cognitive deficits are also defined as endophenotypes i e measurable phenotypes linking these diseases with discrete heritable and reproducible traits This points to the importance of elucidating these endophenotypes in translational studies Animal models may not mimic the full spectrum of clinical symptoms but may act as analogies of particular behaviors or other pathological outcomes They are useful to search for the etiology of particular psychiatric illnesses and novel therapeutics Moreover several behavioral tests to measure cognitive performance in rodents and other species have been implemented The primary focus of the present topic is to provide up to date information on cognitive deficits of neuropsychiatric disorders such as schizophrenia This Research Topic also delineates future directions for translational studies aimed at developing novel treatments interventions of cognitive disturbances *Improving Memory Deficits in*
