

Cognitive Ethology!

- Cognitive ethology assumes that animals are capable of conscious thought and intentionality
- Normally traits given just to humans
- Assumption is data driven:
 - Animal behavior shows complexity, flexibility and cleverness
 - Conscious intent is demonstrated by these behaviors

Cognitive Ethology

Cognitive Ethology:

Cognitive Ethology Carolyn A. Ristau, Peter Marler, 2014-02-25 This collection of essays was written by former students, associates, admirers, critics, and friends of Donald R. Griffin, the creator of cognitive ethology. Stimulated by his work, this volume presents ideas and experiments in the field of cognitive ethology: the exploration of the mental experiences of animals as they behave in their natural environment during the course of their normal lives. Cognitive Ethology discusses the possibility that animals may have abilities to experience, communicate, reason, and plan beyond those usually ascribed to them in a black box or stimulus-response interpretation of their behavior. Contributions from scientists who have been associated with or influenced by Griffin offer a lively array of views, some disparate from one another and some especially selected to present approaches contrary to his.

Species of Mind Colin Allen, Marc Bekoff, 1999-07-26 The heart of this book is the reciprocal relationship between philosophical theories of mind and empirical studies of animal cognition. Colin Allen, a philosopher, and Marc Bekoff, a cognitive ethologist, approach their work from a perspective that considers arguments about evolutionary continuity to be as applicable to the study of animal minds and brains as they are to comparative studies of kidneys, stomachs, and hearts. Cognitive ethologists study the comparative, evolutionary, and ecological aspects of the mental phenomena of animals. Philosophy can provide cognitive ethology with an analytical basis for attributing cognition to nonhuman animals and for studying it, and cognitive ethology can help philosophy to explain mentality in naturalistic terms by providing data on the evolution of cognition. This interdisciplinary approach reveals flaws in common objections to the view that animals have minds. The heart of the book is this reciprocal relationship between philosophical theories of mind and empirical studies of animal cognition. All theoretical discussion is carefully tied to case studies, particularly in the areas of antipredatory vigilance and social play, where there are many points of contact with philosophical discussions of intentionality and representation. Allen and Bekoff make specific suggestions about how to use philosophical theories of intentionality as starting points for empirical investigation of animal minds, and they stress the importance of studying animals other than nonhuman primates.

Cognitive Ethology Carolyn A. Ristau, 1991 [Readings in Animal Cognition](#) Marc Bekoff, Dale Jamieson, 1996 This collection of 24 readings is the first comprehensive treatment of important topics by leading figures in the rapidly growing interdisciplinary field of animal cognition. Taken together, the essays provide the nucleus for an introductory course in animal cognition, cognitive ethology, and comparative psychology, philosophy of biology, or philosophy of mind. Selections are grouped in five sections: Perspectives on Animal Cognition; Cognitive and Evolutionary Explanations; Recognition, Choice, Vigilance, and Play; Communication and Language; and Animal Minds. Seventeen essays are reprinted from the authors' much-cited two-volume collection, *Interpretation and Explanation in the Study of Animal Behavior*. One essay taken from that book has been subsequently revised, and five additional essays are recent examples of critical thinking in cognitive ethology. The preface and final chapter, *Ethics and the Study of Animal Cognition*, are new. A Bradford Book.

Advances in the Study of Behavior, 1992-05-14 Advances in the Study of Behavior remains one of the most turned to sources for penetrating insight on the latest findings in behavior research This serial has kept pace with the vigorous multidisciplinary growth of the field and covers all major aspects from ecology to endocrinology in both human and animal subjects Critical reviews presentations of major research programs and communication of significant new concepts provide readers with an up to date overview of the latest developments in this field The series does not focus narrowly on one or a few fields but features articles covering the best behavioral work from a wide spectrum The skill and concepts of scientists in such diverse fields necessarily differ making the task of developing cooperation and communication among them a difficult one But it is one that is of great importance and one to which the editors and publisher of Advances in the Study of Behavior are committed Each volume of Advances in the Study of Behavior contains an index and each chapter includes references

Animal Passions and Beastly Virtues Marc Bekoff, 2006 An engaging thoughtful look at the science and ethics of research into animal behavior
Morality's Progress Dale Jamieson, 2002 Morality's Progress is the summation of nearly three decades of work by Dale Jamieson a leading figure in environmental ethics and bioethics The twenty two papers here are invigoratingly diverse but together tell a unified story about various aspects of the morality of our relationships to animals and to nature The volume begins by addressing the possibility of moral progress and the value of practical ethics It then moves on to discuss the nature of animal minds and our moral duties with respect to animals it concludes with essays that address larger environmental questions Considered as a whole Morality's Progress is an attempt to draw out the moral consequences of a thoroughgoing Darwinian Naturalism The perspective that informs this work is philosophically naturalist morally consequentialist and metaethically constructivist Jamieson's essays will convince sceptics that thinking about our moral relations to animals and nature can offer great intellectual reward and his work here sets a challenging controversial agenda for the future

Animals as Experiencing Entities Michael J. Glover, Les Mitchell, 2024-03-04 This volume explores the experiences of those with little or no power usually although not exclusively animals The theme of animals as experiencing entities is what links the chapters and characterises the volume Broadly each author in this volume contributes in one of two ways The first group in Section 1 theoretically engages animal subjectivity animal experiences and ways in which these are to some extent accessible and knowable to humans The second group of authors in Section 2 offer narrative accounts about specific animals or groups of animals and explore to some extent their subjective historical experiences In summary the first section diversely theorises about animal experiences while the second section's authors assume animals subjective experiences and construct narratives that take into account how animals might have subjectively experienced historical phenomena

The Cognitive Animal Marc Bekoff, Colin Allen, Gordon M. Burghardt, 2002-06-21 The fifty seven original essays in this book provide a comprehensive overview of the interdisciplinary field of animal cognition The contributors include cognitive ethologists behavioral ecologists experimental and developmental psychologists behaviorists

philosophers neuroscientists computer scientists and modelers field biologists and others The diversity of approaches is both philosophical and methodological with contributors demonstrating various degrees of acceptance or disdain for such terms as consciousness and varying degrees of concern for laboratory experimentation versus naturalistic research In addition to primates particularly the nonhuman great apes the animals discussed include antelopes bees dogs dolphins earthworms fish hyenas parrots prairie dogs rats ravens sea lions snakes spiders and squirrels The topics include but are not limited to definitions of cognition the role of anecdotes in the study of animal cognition anthropomorphism attention perception learning memory thinking consciousness intentionality communication planning play aggression dominance predation recognition assessment of self and others social knowledge empathy conflict resolution reproduction parent young interactions and caregiving ecology evolution kin selection and neuroethology

On Human Nature Michel

Tibayrenc, Francisco J. Ayala, 2016-09-12 *On Human Nature* Biology Psychology Ethics Politics and Religion covers the present state of knowledge on human diversity and its adaptive significance through a broad and eclectic selection of representative chapters This transdisciplinary work brings together specialists from various fields who rarely interact including geneticists evolutionists physicians ethologists psychoanalysts anthropologists sociologists theologians historians linguists and philosophers Genomic diversity is covered in several chapters dealing with biology including the differences in men and apes and the genetic diversity of mankind Top specialists known for their open mind and broad knowledge have been carefully selected to cover each topic The book is therefore at the crossroads between biology and human sciences going beyond classical science in the Popperian sense The book is accessible not only to specialists but also to students professors and the educated public Glossaries of specialized terms and general public references help nonspecialists understand complex notions with contributions avoiding technical jargon Provides greater understanding of diversity and population structure and history with crucial foundational knowledge needed to conduct research in a variety of fields such as genetics and disease Includes three robust sections on biological psychological and ethical aspects with cross fertilization and reciprocal references between the three sections Contains contributions by leading experts in their respective fields working under the guidance of internationally recognized and highly respected editors

The Animal Mind Kristin

Andrews, 2014-10-30 The study of animal cognition raises profound questions about the minds of animals and philosophy of mind itself Aristotle argued that humans are the only animal to laugh but in recent experiments rats have also been shown to laugh In other experiments dogs have been shown to respond appropriately to over two hundred words in human language In this introduction to the philosophy of animal minds Kristin Andrews introduces and assesses the essential topics problems and debates as they cut across animal cognition and philosophy of mind She addresses the following key topics what is cognition and what is it to have a mind What questions should we ask to determine whether behaviour has a cognitive basis the science of animal minds explained ethology behaviourist psychology and cognitive ethology rationality in animals animal

consciousness what does research into pain and the emotions reveal What can empirical evidence about animal behaviour tell us about philosophical theories of consciousness does animal cognition involve belief and concepts do animals have a Language of Thought animal communication other minds do animals attribute mindedness to other creatures moral reasoning and ethical behaviour in animals animal cognition and memory Extensive use of empirical examples and case studies is made throughout the book These include Cheney and Seyfarth s vervet monkey research Thorndike s cat puzzle boxes Jensen s research into humans and chimpanzees and the ultimatum game Pankseep and Burgdorf s research on rat laughter and Clayton and Emery s research on memory in scrub jays Additional features such as chapter summaries annotated further reading and a glossary make this an indispensable introduction to those teaching philosophy of mind animal cognition It will also be an excellent resource for those in fields such as ethology biology and psychology
