**Nancy Kanwisher, Morris Moscovitch**

## **Cognitive Neuropsychology Of Face Recognition:**

**The Cognitive Neuroscience of Face Processing** Nancy Kanwisher, Morris Moscovitch, 2000 This special issue showcases new findings from many investigators in this field in studies that use a wide range of experimental techniques including brain imaging ERPs patient studies and single unit recording in monkeys [Face Recognition and its Disorders](#)

Sarah Bate, 2017-09-09 Focusing on disorders Bate unravels the mysteries and intricacies of facial processing from a new perspective covering cognitive developmental and clinical issues Written in an engaging style and encompassing a wealth of detail this is a must read for both students and researchers interested in facial recognition **The Neuropsychology of Face Perception and Facial Expression** Raymond Bruyer, 2014-04-04 This book is the first to offer an overview of the increasingly studied field of face perception Experimental and pathological dissociation methods are used to understand both the precise cognitive mechanisms and the cerebral functions involved in face perception Three main areas of investigation are discussed face processing after brain damage lateral differences for face processing in normals neuropsychological studies on facial expressions **Prosopagnosia** Davide Rivolta, 2013-09-24 This book provides readers with a simplified and comprehensive account of the cognitive and neural bases of face perception in humans Faces are ubiquitous in our environment and we rely on them during social interactions The human face processing system allows us to extract information about the identity gender age mood race attractiveness and approachability of other people in about a fraction of a second just by glancing at their faces By introducing readers to the most relevant research on face recognition this book seeks to answer the questions Why are humans so fast at recognizing faces Why are humans so efficient at recognizing faces Do faces represent a particular category for the human visual system What makes face perception in humans so special Can our face recognition system fail This book presents the author's findings on face perception during his research studies on both normal subjects and subjects with prosopagnosia a neurological disorder characterized by the inability to recognize faces The book describes two known forms of prosopagnosia acquired prosopagnosia which is the result of a brain lesion and congenital prosopagnosia which refers to a lifelong developmental impairment of face recognition Written in a comprehensive and accessible style this book addresses both experts cognitive scientists psychologists neuroscientists and computer scientists and the general public and aims at raising awareness for a debilitating face recognition disorder such as prosopagnosia which is often ignored or misdiagnosed as autism with serious consequences for the affected persons and their families **Face Recognition** Sam S. Rakover, Baruch Cahlon, 2001 Annotation In 1997 Rakover U of Haifa and Cahlon Oakland U Michigan won an award from the Minister of Internal Security of the State of Israel for developing the Catch model for face recognition Since then they have proposed the law of Face Recognition by Similarity Here they describe the computer and mathematical research they have conducted and some of their results Annotation c Book News Inc Portland OR booknews.com **Face Recognition** Katherine B. Leeland, 2008 Face perception is the process by which the brain and

mind understand and interpret the face particularly the human face The face is an important site for the identification of others and conveys significant social information Probably because of the importance of its role in social interaction psychological processes involved in face perception are known to be present from birth to be complex and to involve large and widely distributed areas in the brain These parts of the brain can be damaged to cause a specific impairment in understanding faces known as prosopagnosia This book presents the latest research in the field Cognitive and Computational Aspects of Face Recognition Tim Valentine,2002-09-26 Just how and why we find some faces memorable but others impossible to recognize is a complex and important question with many practical applications This edited collection brings together a multi disciplinary team of researchers to compare and contrast their findings from psychology computer science mathematics and neural network research to present a state of the art description of the latest and best of their results in this field With an international line up of key researches this book is an resource for all researchers and advanced students of this topic in each discipline **The Face Specificity of Lifelong Prosopagnosia** Bradford Z.

Mahon,2020-04-30 Lifelong prosopagnosia has emerged as a key testing ground for theories of visual system organization as well as the development and the emergence of neural specificity in the human brain A key open issue concerns whether individuals who have lifelong prosopagnosia also experience difficulty with recognizing non face stimuli This volume features a thorough review of the congenital prosopagnosia literature and critical commentaries by the leading experts in the field This book was originally published as a special issue of Cognitive Neuropsychology **Handbook of Cognitive**

**Neuropsychology** Brenda Rapp,2015-12-22 This volume reviews the full range of cognitive domains that have benefited from the study of deficits Chapters covered include language memory object recognition action attention consciousness and temporal cognition **Recognising Faces** Vicki Bruce,2019-03-12 Each of us is able to recognise the faces of many

hundreds if not thousands of people known to us We recognise faces despite seeing them in different views and with changing expressions From these varying patterns we somehow extract the invariant characteristics of an individual s face and usually remember why a face seems familiar recalling where we know the person from and what they are called In this book originally published in 1988 the author describes the progress which has been made by psychologists towards understanding these perceptual and cognitive processes and points to theoretical directions which may prove important in the future Though emphasising theory the book also addresses practical problems of eyewitness testimony and discusses the relationship between recognising faces and other aspects of face processing such as perceiving expressions and lipreading The book was aimed primarily at a research audience but would also interest advanced undergraduate students in vision and cognition on and cognition **Face Perception** Vicki Bruce,Andrew W. Young,2012 Human faces are unique biological

structures which convey a complex variety of important social messages Even strangers can tell things from our faces Written in a clear and accessible style this book will be of interest to all students studying face perception and social

cognition      **Face Recognition** James Tanaka,2017-10-02 Although most people are good at face recognition we are particularly good at recognizing the faces of individuals who share our race gender age and species What factors might account for this type of bias in face recognition This collection considers the issue of how our identity influences the type of perceptual experience that we have to faces which in turn influences the processes of face recognition Leading experts from cognitive psychology neuroscience and computer science address a wide range of topics related to the neural and computational basis of the own versus other effect in face recognition the impact of early experience in infant face recognition the effect of laboratory training to reverse the other race effect cultural differences in expression recognition and the forensic and social consequences of own versus other face recognition The combined work gives the reader a comprehensive overview of the field and an insider s perspective on the role that identity and experience play in the everyday process of face recognition This book was originally published as a special issue of Visual Cognition      **Face Perception** Andy Young,Vicki Bruce,2023-12-15 Human faces are unique biological structures that convey a complex variety of important social messages Even strangers can tell things from our faces our feelings our locus of attention something of what we are saying our age sex and ethnic group whether they find us attractive or approachable Face Perception second edition has been thoroughly updated throughout providing an up to date integrative summary by two authors who have helped to develop and shape the field The book begins with the foundations of face perception before considering what is known about how we see different things in faces It concludes with a discussion of how face perception relates to wider questions involving interpersonal perception and re examines the question of what makes faces special The importance of integrating different research perspectives and asking critical theoretical questions is emphasised throughout to develop a distinctive point of view of the area Written in a clear and accessible style this is invaluable reading for all students and researchers interested in studying face perception and social cognition      Human Cognitive Neuropsychology (Classic Edition) Andrew W. Ellis,Andrew W. Young,2017-07-14 Cognitive neuropsychology seeks to understand impairments of specific cognitive functions in relation to a model of normal cognitive processing The conclusions drawn from the study of abnormal processes are in turn used in the development and testing of theories of normal cognition First published in 1988 this seminal book represented an attempt to synthesize and systematize progress in the study of cognitive neuropsychology and therefore provides an important snapshot of the field at the time In addition to reviewing different forms of impairment and discussing their implications for theories of normal function this book also examines the empirical and theoretical foundations of the subject including the use of single case studies and the assumptions that must be made about the mind and brain This classic edition marks 25 years in print and includes a brand new introduction written by the authors Ellis and Young The Augmented Edition of Human Cognitive Neuropsychology published in 1997 is also still available This classic edition will be important reading for students of cognitive psychology cognitive neuroscience and neuropsychology      **Perceptual Expertise** Isabel

Gauthier, Michael Tarr, Daniel Bub, 2009-12-03 This book presents a comprehensive survey of perceptual expertise in visual object recognition and introduces a novel collaborative model codified as the Perceptual Expertise Network PEN This unique group effort is focused on delineating the domain general principles of high level visual learning that can account for how different object categories are processed and come to be associated with spatially localized activity in the primate brain

The Oxford Handbook of Cognitive Psychology Daniel Reisberg, 2013-04-04 This handbook is an essential comprehensive resource for students and academics interested in topics in cognitive psychology including perceptual issues attention memory knowledge representation language emotional influences judgment problem solving and the study of individual differences in cognition

**Oxford Handbook of Face Perception** Andrew J. Calder, 2011-07-28 In the past 30 years face perception has become an area of major interest within psychology This is the most comprehensive and commanding review of the field ever published

**Handbook of Research on Face Processing** A.W. Young, H.D. Ellis, 2013-10-22 The high degree of scientific interest in face processing is readily understandable since people's faces provide such a wealth of social information Moreover investigations have produced evidence of highly precocious face processing abilities in infants and of neural mechanisms in adults that seem to be differentially involved in face perception Such findings demonstrate that as one might expect the psychological importance of the face has clear biological underpinnings There are also urgent practical reasons for wanting to understand face processing The most extensively investigated of these involve forensic issues Other applications include the development of automated recognition systems for security and other purposes and understanding and rehabilitating disorders and impairments linked to brain injuries and psychiatric conditions Current studies of face processing are grouped in the volume into eleven topic areas For each area the editors approached an acknowledged authority and commissioned a review chapter summarising the findings that have been made These chapters were then circulated to other experts who were asked to write brief commentaries that developed theoretical or empirical points of importance to each area In this way a balanced coverage of each topic is achieved The book begins with a section examining the evidence suggesting that there may be something special about face processing This is followed by consideration of the face as a visual pattern Then there are four sections dealing with major uses of facial information followed by sections discussing the development of face processing abilities and the neural mechanisms involved The last three sections of the book deal with topics for which there are important practical applications for the studies reported

**The Cognitive Neuropsychology of Alzheimer-type Dementia** Robin Morris, 1996 This book draws together recent developments in cognitive affects of Alzheimer's disease how it affects mental functions such as memory attention and language As well as providing a theoretical overview it discusses how knowledge of neuropsychological impairment can be related to the neurobiology and genetics of the disease Also covered are the practical issues of assessment neurorehabilitation and treatment This book will be of interest both to researchers in Alzheimer's and clinicians treating people with the disease

Cognitive Neuropsychology Rosaleen A. McCarthy, Elizabeth K. Warrington, 1990-10-28 This book gives equal weight to the psychological and neurological approaches to the study of cognitive deficits in patients with brain lesions The result is an analysis of cognitive skills and abilities that departs from the more usual syndrome approach
