International Conference of Computational Methods in Sciences and Engineering (ICCMSE 2004) Theodore Simos, George Maroulis, 2019-04-29 The International Conference of Computational Methods in Sciences and Engineering ICCMSE is unique in its kind It regroups original contributions from all fields of the traditional Sciences Mathematics Physics Chemistry Biology Medicine and all branches of Engineering The aim of the conference is to bring together computational scientists from several disciplines in order to share methods and ideas More than 370 extended abstracts have been submitted for consideration for presentation in ICCMSE 2004 From these 289 extended abstracts have been selected after international peer review by at least two independent reviewers

Quantum Teleportation Under Noise Dongfen Li, 2025-06-24 This book offers a deep dive into quantum teleportation and immune noise models providing cutting edge solutions to challenges in noisy quantum communication systems It covers advanced theories and practical methods for building robust high fidelity quantum channels that ensure secure communication even in noisy environments making it a vital resource for researchers and professionals in quantum information science Key topics include quantum teleportation protocols immune noise models quantum information splitting and multi degree of freedom quantum teleportation By developing a unified framework for high fidelity quantum channels the book tackles major issues like entanglement death decoherence and channel capacity limitations It offers solutions to improve quantum state fidelity channel performance and security enhancing the practicality of quantum teleportation in areas like national defense finance and secure communication The book targets academic researchers engineers and professionals in quantum information cryptography and secure communications along with advanced students interested in quantum teleportation in noisy environments

Atom Optics and Space Physics E. Arimondo, W. Ertmer, Wolfgang Schleich, E. M. Rasel, 2009 The goal of this volume is to discuss the rapidly moving field of atom optics and interferometry with all its intricate aspects ranging from fundamental physics to applications and the theory of relativity The breathtaking success in manipulating atoms using lasers has encouraged these two so far disjunct communities to move closer together and begin collaborations After an introduction to atom optics and Bose Einstein condensation the theoretical foundations of cold atom interferometers their use to test gravity and their implementation in laboratory measurements of the Earth rotation and of Newton's gravitational constant are discussed Several papers discuss the characteristics of gyroscopes and interferometers as sensors for inertial forces starting from gyroscopes based on light waves and comparing their sensitivity to those based on matter waves The final topic is the variation of fundamental constants a subject that during the last years has attracted a lot of attention from different communities of physics
