Galois Theories of Linear Difference Equations: An Introduction Charlotte Hardouin, Jacques Sauloy, Michael F.

Singer, 2016-04-27 This book is a collection of three introductory tutorials coming out of three courses given at the CIMPA Research School Galois Theory of Difference Equations in Santa Marta Columbia July 23 August 1 2012 The aim of these tutorials is to introduce the reader to three Galois theories of linear difference equations and their interrelations Each of the three articles addresses a different Galoisian aspect of linear difference equations The authors motivate and give elementary examples of the basic ideas and techniques providing the reader with an entry to current research In addition each article contains an extensive bibliography that includes recent papers the authors have provided pointers to these articles allowing the interested reader to explore further

Cohomological Invariants in Galois Cohomology Skip Garibaldi, Alexander Merkurjev, Jean-Pierre Serre, 2003 This volume addresses algebraic invariants that occur in the confluence of several important areas of mathematics including number theory algebra and arithmetic algebraic geometry The invariants are analogues for Galois cohomology of the characteristic classes of topology which have been extremely useful tools in both topology and geometry It is hoped that these new invariants will prove similarly useful Early versions of the invariants arose in the attempt to classify the quadratic forms over a given field The authors are well known experts in the field Serre in particular is recognized as both a superb mathematician and a master author His book on Galois cohomology from the 1960s was fundamental to the development of the theory Merkurjev also an expert mathematician and author co wrote *The Book of Involutions* Volume 44 in the AMS Colloquium Publications series an important work that contains preliminary descriptions of some of the main results on invariants described here The book also includes letters between Serre and some of the principal developers of the theory It will be of interest to graduate students and research mathematicians interested in number th

Segal, 2007-01-05 This lecture series was presented by a consortium of universities in conjunction with the U S Air Force Office of Scientific Research during the period 1967 1969 in Washington D C and at the University of Maryland The series of lectures was devoted to active basic areas of contemporary analysis which is important in or shows potential in real world applications Each lecture presents a survey and critical review of aspects of the specific area addressed with emphasis on new results open problems and applications This volume contains six lectures in the series subsequent lectures will also be published

Lectures in Modern Analysis and Applications III R. M. Dudley, J. Feldman, B. Kostant, R. P. Langlands, E. M. Stein, 2006-11-14 This lecture series was presented by a consortium of universities in conjunction with the U S Air Force Office of Scientific Research during the period 1967 1969 in Washington D C and at the University of Maryland The series of lectures was devoted to active basic areas of contemporary analysis which is important in or shows potential in real world applications Each lecture presents a survey and critical review of aspects of the specific area addressed with emphasis on

new results open problems and applications This volume contains five lectures in the series **Local Homotopy Theory** John F. Jardine, 2015-05-27 This monograph on the homotopy theory of topologized diagrams of spaces and spectra gives an expert account of a subject at the foundation of motivic homotopy theory and the theory of topological modular forms in stable homotopy theory Beginning with an introduction to the homotopy theory of simplicial sets and topos theory the book covers core topics such as the unstable homotopy theory of simplicial presheaves and sheaves localized theories cocycles descent theory non abelian cohomology stacks and local stable homotopy theory A detailed treatment of the formalism of the subject is interwoven with explanations of the motivation development and nuances of ideas and results The coherence of the abstract theory is elucidated through the use of widely applicable tools such as Barr's theorem on Boolean localization model structures on the category of simplicial presheaves on a site and cocycle categories A wealth of concrete examples convey the vitality and importance of the subject in topology number theory algebraic geometry and algebraic K theory Assuming basic knowledge of algebraic geometry and homotopy theory **Local Homotopy Theory** will appeal to researchers and advanced graduate students seeking to understand and advance the applications of homotopy theory in multiple areas of mathematics and the mathematical sciences Analytic Theory of Differential Equations P. F. Hsieh, A. W. J. Stoddart, 2006-11-15 **Iwasawa Theory and Its Perspective, Volume 2** Tadashi Ochiai, 2024-04-25 Iwasawa theory began in the late 1950s with a series of papers by Kenkichi Iwasawa on ideal class groups in the cyclotomic tower of number fields and their relation to p adic L functions The theory was later generalized by putting it in the context of elliptic curves and modular forms The main motivation for writing this book was the need for a total perspective of Iwasawa theory that includes the new trends of generalized Iwasawa theory Another motivation is to update the classical theory for class groups taking into account the changed point of view on Iwasawa theory The goal of this second part of the three part publication is to explain various aspects of the cyclotomic Iwasawa theory of p adic Galois representations **Colloquium on Methods of Optimization** N.
