

Waves in cold plasma

$$\nabla \times \frac{\partial \tilde{\mathbf{B}}}{\partial t} = -\nabla \times (\nabla \times \tilde{\mathbf{E}}) = \mu_0 n_0 \frac{e^2}{m_e} \tilde{\mathbf{E}} + \mu_0 \epsilon_0 \frac{\partial^2 \tilde{\mathbf{E}}}{\partial t^2}$$

Rewriting the cur curl term using the BAC-CAB rule

$$-\nabla \times (\nabla \times \tilde{\mathbf{E}}) = -\nabla(\nabla \cdot \tilde{\mathbf{E}}) + \nabla^2 \tilde{\mathbf{E}} = \mu_0 n_0 \frac{e^2}{m_e} \tilde{\mathbf{E}} + \mu_0 \epsilon_0 \frac{\partial^2 \tilde{\mathbf{E}}}{\partial t^2}$$

For the case of no space charge separation, this equation reduces to

$$\nabla^2 \tilde{\mathbf{E}} = -\mu_0 n_0 \frac{e^2}{m_e} \tilde{\mathbf{E}} + \mu_0 \epsilon_0 \frac{\partial^2 \tilde{\mathbf{E}}}{\partial t^2} = \mu_0 \epsilon_0 \frac{n_0 e^2}{\epsilon_0 m_e} \tilde{\mathbf{E}} + \mu_0 \epsilon_0 \frac{\partial^2 \tilde{\mathbf{E}}}{\partial t^2}$$

i.e. a wave equation, where we note the plasma frequency

$$\omega_{p,e}^2 = \frac{n_0 e^2}{\epsilon_0 m_e}$$

Cold Plasma Waves:

Cold Plasma Waves H.G. Booker, 2012-12-06 The book aims to present current knowledge concerning the propagation of electro magnetic waves in a homogeneous magnetoplasma for which temperature effects are unimportant It places roughly equal emphasis on the radio and the hydromagnetic parts of the electromagnetic spectrum The dispersion properties of a magnetoplasma are treated as a function both of wave frequency assumed real and of ionization density However there is little discussion of propagation in a stratified medium for of collisions is included only which reference may be made to Budden 1 The effect in so far as this can be done with simplicity The book describes how pulses are radiated from both small and large antennas embedded in a homogeneous magneto plasma The power density radiated from a type of dipole antenna is studied as a function of direction of radiation in all bands of wave frequency Input reactance is not treated but the dependence of radiation resistance on wave frequency is described for the entire electromagnetic spectrum Also described is the relation between beaming and guidance for Alfvén waves

Cold Plasma Waves Henry G. Booker, 1984 **The Theory of Plasma Waves** Thomas Howard Stix, 1962 *Plasma Waves* Donald Gary Swanson, 2020-07-14 Extended and revised Plasma Waves 2nd Edition provides essential information on basic formulas and categorizes the various possible types of waves and their interactions The book includes modern and complete treatments of electron cyclotron emission collisions relativistic effects Landau damping quasilinear and nonlinear wave theory and tunneling equations The broad scope encompasses waves in cold warm and hot plasmas and relativistic plasma waves Special chapters deal with the effects of boundaries inhomogeneities and nonlinear effects The author derives all formulae and describes several fundamental wave experiments allowing for a greater appreciation of the subject Waves in Plasmas Thomas H. Fusion Energy Update, 1980 **Plasma Waves** J. F. Denisse, Jean-Loup Delcroix, 1963 **Plasma Waves in the Magnetosphere** A.D.M. Walker, 2013-03-13 This book is a study of plasma waves which are observed in the earth's

magnetosphere The emphasis is on a thorough but concise treatment of the necessary theory and the use of this theory to understand the manifold varieties of waves which are observed by ground based instruments and by satellites We restrict our treatment to waves with wavelengths short compared with the spatial scales of the background plasma in the magnetosphere By so doing we exclude large scale magnetohydrodynamic phenomena such as ULF pulsations in the Pc2-5 ranges The field is an active one and we cannot hope to discuss every wave phenomenon ever observed in the magnetosphere We try instead to give a good treatment of phenomena which are well understood and which illustrate as many different parts of the theory as possible It is thus hoped to put the reader in a position to understand the current literature The treatment is aimed at a beginning graduate student in the field but it is hoped that it will also be of use as a reference to established workers A knowledge of electromagnetic theory and some elementary plasma physics is assumed The mathematical background required includes a knowledge of vector calculus linear algebra and Fourier transform theory encountered in standard undergraduate physics curricula A reasonable acquaintance with the theory of functions of a complex variable including contour integration and the residue theorem is assumed
