An Introduction to Road Design for Cold Regions J. Paul Guyer, 2013-06-05 The construction of satisfactory roads and airfield runways in seasonal frost and permafrost areas is normally more difficult than in temperate regions because the imperviousness of the underlying permafrost tends to produce poor soil drainage conditions and because disturbance of the natural surface may set in motion adjustments in thermal regime drainage and slope stability which may have serious and progressive consequences This publication discusses roadway and runway design considerations for cold arctic and subarctic regions

Military Facilities and Environmental Stresses in Cold Regions R. P. Murrmann, Sherwood Reed, 1972 The types of stresses imposed by military activities on the environment are not well known nor is it possible in most cases to quantify or predict the impact of stresses on a long term basis A research program is currently being formulated to correct this deficiency The report was prepared as a preliminary step to identifying research problems which arise as a special consequence of military facilities in cold regions The subjects discussed include air pollution Ice fog Terrain impacts Erosion Permafrost and Water pollution

Foundations of Structures in Cold Regions Frederick J. Sanger, 1969 The monograph describes the various kinds of foundations used for structures on
