Klessen,Cornelis Petrus Dullemond,Thomas K. Henning,2014-12-18 The revolutionary discovery of thousands of confirmed and candidate planets beyond the solar system brings forth the most fundamental question How do planets and their host stars form and evolve

Protostars and Planets VI brings together more than 250 contributing authors at the forefront of their field conveying the latest results in this research area and establishing a new foundation for advancing our understanding of stellar and planetary formation. Continuing the tradition of the Protostars and Planets series, this latest volume uniquely integrates the cross-disciplinary aspects of this broad field. Covering an extremely wide range of scales from the formation of large clouds in our Milky Way galaxy down to small chondrules in our solar system, Protostars and Planets VI takes an encompassing view with the goal of not only highlighting what we know but most importantly emphasizing the frontiers of what we do not know. As a vehicle for propelling forward new discoveries on stars, planets, and their origins, this latest volume in the Space Science Series is an indispensable resource for both current scientists and new students in astronomy, astrophysics, planetary science, and the study of meteorites.

**Dynamics of Star Clusters** Jeremy Goodman, Piet Hut, 2012-12-06

The emphasis in these proceedings of IAD Symposium No. 113, Dynamics of Star Clusters and the formation of star clusters, held in the spring of 1984, was the rapid increase during the preceding year in our understanding of core collapse. The last IAD Symposium to discuss the dynamics of star clusters at length was No. 69, Dynamics of Stellar Systems, held in Besançon in 1974. For a few years afterwards, globular clusters received much attention due to the discovery of X-ray bursters and the mounting evidence that X-ray sources in globular clusters were formed in completely different ways than those within our galaxy. Globular clusters, which until this time had a reputation for sedate old-age lives, turned out to lead violent private lives at high energies. However, in the early 80s, globular clusters seemed to lose some of the glamor of the 70s. The grand speculations of heavy black holes lurking in their centers had to make way for a variety of observational evidence which indicated that the X-ray sources are low-mass close binaries instead. But though dynamical fashion turned to heavy galactic halos and so on, some of the unsolved theoretical problems regarding the evolution of star clusters kept their fascination for a number of relatively isolated workers. After several years of inconspicuous labor, a number of preprints suddenly appeared in the spring of 1983 that studied the evolution of globular clusters after core collapse.
