**The Book of Involutions** Max-Albert Knus,1998 Written for graduate students and research mathematicians this monograph is an exposition of the theory of central simple algebras with involution in relation to linear algebraic groups Involutions are viewed as twisted forms of hermitian quadrics leading to new developments on the model of the algebraic theory of quadratic forms In addition to classical groups phenomena related to triality are discussed as well as groups of type F4 or G2 arising from exceptional Jordan or composition algebras the discriminant algebra of an algebra with unitary involution and the algebra theoretic counterpart to linear groups of type D4 Annotation copyrighted by Book News Inc Portland OR **(1947-1965)**. Yankov on Non-Classical**

**Logics, History and Philosophy of Mathematics** Alex Citkin, Ioannis M. Vandoulakis, 2022-11-08 This book is dedicated to V A Yankov's seminal contributions to the theory of propositional logics. His papers published in the 1960s are highly cited even today. The Yankov characteristic formulas have become a very useful tool in propositional modal and algebraic logic. The papers contributed to this book provide the new results on different generalizations and applications of characteristic formulas in propositional modal and algebraic logics. In particular, an exposition of Yankov's results and their applications in algebraic logic, the theory of admissible rules and refutation systems is included in the book. In addition, the reader can find the studies on splitting and join splitting in intermediate propositional logics that are based on Yankov type formulas which are closely related to canonical formulas and the study of properties of predicate extensions of non-classical propositional logics. The book also contains an exposition of Yankov's revolutionary approach to constructive proof theory. The editors also include Yankov's contributions to history and philosophy of mathematics and foundations of mathematics as well as an examination of his original interpretation of history of Greek philosophy and mathematics.

This compilation also serves as an index to the literature for locating references on a particular problem and quickly finds numbers such as 712 number of partitions of 30, 18th Catalan number or expansion of to 60 decimal places. Other topics include the method of differences, self-generating sequences, polyominoes, permutations and puzzle sequences. This publication is a good source for students and researchers who are confronted with strange and important sequences.
