Muehlbauer,W.J. Kaiser,2012-12-06 The goal of the Second International Food Legume Research Conference held in Cairo Egypt was to build on the success of the first conference held nearly 6 years earlier at Spokane Washington USA It was at that first conference where the decision was made to hold the second Conference in Egypt and so near the ancestral home of these food legume crops It has been a long held view that the cool season food legumes had their origin in the Mediterranean basin and the Near east arc and there is little doubt that food legumes were a staple food of the ancient Egyptian civilization The cool season food legumes have the reputation for producing at least some yield under adverse conditions of poor fertility and limited moisture i e in circumstances where other crops are likely to fail completely Yields of cool season food legumes are particularly poor in those regions where they are most important to local populations The influx of more profitable crops such as wheat maize and soybeans have gradually relegated the food legumes to marginal areas with poor fertility and limited water which exposes them to even greater degrees of stress In the past two decades production of food legumes has declined in most of the developing countries while at the same time it has expanded greatly in Canada Australia and most notably in Turkey **History of Soy Nutritional Research (1946-1989)** William Shurtleff; Akiko Aoyagi,2021-02-07 The world s most comprehensive well documented and well illustrated book on this subject With extensive subject and geographic index 20 photographs and illustrations many color Free of charge in digital PDF format **History of Soybeans and Soyfoods in South Asia / Indian Subcontinent (1656-2010)** William Shurtleff,Akiko Aoyagi,2010-12 Covers Afghanistan Bangladesh Bhutan India Nepal Pakistan Sikkim and Sri Lanka [History of Modern Soy Protein Ingredients - Isolates, Concentrates, and Textured Soy Protein Products \(1911-2016\)](#) William Shurtleff; Akiko Aoyagi,2016-01-17 The world s most comprehensive well documented and well illustrated book on this subject With extensive subject and geographical index 405 photographs and illustrations mostly color Free of charge in digital PDF format on Google Books [History of Soy Sprouts \(100 CE To 2013\)](#) William Shurtleff,Akiko Aoyagi,2013 [Food Science](#) Norman N. Recent Advances of Research in Antinutritional Factors in Legume Seeds and Rapeseed A J M Jansman,G D Hill,J Huisman,A F B Van Der Poel,1998-07 This publication contains the proceedings of the 4th International Workshop on Antinutritional Factors in Legume Seeds and Oilseeds held in Toledo Spain on 8 10 March 2004 This series of meetings bring together experts working in this field of Science from throughout the world A major feature of each conference session is an invited review which outlines the advances that have been made in a particular area since the last meeting A major factor that was considered at this meeting was the likely impact of plant genetic modification on the nutritional quality of their seeds for human and animal feeding As an example already a number of legume species and rapeseed have been modified to improve the sulphur amino acid content of their seed and thus their protein quality Besides the major grain legume species and rapeseed that had been discussed at previous meetings in this series number of crop products as potential protein sources for animal feeding were considered for the first time These included cottonseed meal linseed meal and sunflower seed meal The potential of some new exotic crops from Mexico was also covered including Mexican species of the genus *Lupinus* and a Mexican plant from the same family as castor bean which has a very high oil content but is usually toxic Work from Cuba compared the nutritional characteristics of soybean with a range of tropical grain legume species which have received little previous attention A major change at this meeting was the greater consideration of the effects both positive and negative of the consumption of these seeds for human nutrition A major

review on the development of allergenicity to legume seed in humans is included There was also consideration of the potential role of antinutritional factors in reducing the growth of various types of tumour cells The presented papers also suggest that the consumption of legume seed in the diet can potentially reduce serum cholesterol levels Overall from the 5 conference sessions there are 52 papers Of these 7 are major invited reviews on the current state of research in this important area for human and animal feeding
