Interdisciplinary Collaboration Sharon J. Derry, Christian D. Schunn, Morton Ann Gernsbacher, 2014-04-04

Interdisciplinary Collaboration calls attention to a serious need to study the problems and processes of interdisciplinary inquiry to reflect on the current state of scientific knowledge regarding interdisciplinary collaboration and to encourage research that studies interdisciplinary cognition in relation to the ecological contexts in which it occurs It contains reflections and research on interdisciplinarity found in a number of different contexts by practitioners and scientists from a number of disciplines and several chapters represent attempts by cognitive scientists to look critically at the cognitive science enterprise itself Representing all of the seven disciplines listed in the official logo of the Cognitive Science Society and its journal anthropology artificial intelligence education linguistics neuroscience philosophy and psychology this book is divided into three parts Part I sets the stage by providing three broad overviews of literature and theory on interdisciplinary research and education Part II examines varied forms of interdisciplinarity in situ rather than the more traditional macrolevel interview or survey approaches to studying group work Part III consists of noted cognitive scientists who reflect on their experiences and turn the analytical lenses of their own disciplines to the critical examination of cognitive science itself as a case study in interdisciplinary collaboration Interdisciplinary Collaboration is intended for scholars at the graduate level and beyond in cognitive science and education

**The Extended Theory of Cognitive Creativity** Antonino Pennisi, Alessandra Falzone, 2019-09-25 This edited volume focuses on the hypothesis that performativity is not a property confined to certain specific human skills or to certain specific acts of language nor an accidental enrichment due to creative intelligence Instead the executive and motor component of cognitive behavior should be considered an intrinsic part of the physiological functioning of the mind and as endowed with self generative power Performativity in this theoretical context can be defined as a constituent component of cognitive processes The material action allowing us to interact with reality is both the means by which the subject knows the surrounding world and one through which he experiments with the possibilities of his body This proposal is rooted in models now widely accepted in the philosophy of mind and language in fact it focuses on a space of awareness that is not in the individual or outside it but is determined by the species specific ways in which the body acts on the world This theoretical hypothesis will be pursued through the latest interdisciplinary methodology typical of cognitive science that coincide with the five sections in which the book is organized Embodied enactivist philosophical approaches Aesthetics approaches Naturalistic and evolutionary approaches Neuroscientific approaches Linguistics approaches This book is intended for linguists philosophers psychologists cognitive scientists scholars of art and aesthetics performing artists researchers in embodied cognition especially enactivists and students of the extended mind

and connections artificial neural networks The discussion of these theories provides an integrated view of the different achievements of the various fields of cognitive science This second edition includes substantial revision and new material Part I which presents the different theoretical approaches has been updated in light of recent work the field Part II which treats extensions to cognitive science has been thoroughly revised with new chapters added on brains emotions and consciousness Other additions include a list of relevant Web sites at the end of each chapter and a glossary at the end of the book As in the first edition each chapter concludes with a summary and suggestions for further reading

Giambattista Vico and the Cognitive Science Enterprise Marcel Danesi, 1995 Perhaps the oldest and most intriguing conundrum of all is the question What is the mind In the last decade an interdisciplinary approach known as cognitive science has emerged to study the mind with the ideas and methods forged by artificial intelligence researchers The aim of this book is to suggest ways in which the cognitive science agenda can be shaped more meaningfully according to a view of mind proposed by Giambattista Vico two and a half centuries ago This view is grounded on the products of imagination By studying myths poetry narrations etc the cognitive scientist will discover the creative force behind them
