Coherence In Spontaneous Text:

Coherence in Spontaneous Text Morton Ann Gernsbacher, T. Givón, 1995-03-23 The main theme running through this volume is that coherence is a mental phenomenon rather than a property of the spoken or written text or of the social situation Coherence emerges during speech production and comprehension allowing the speech receiver to form roughly the same episodic representation as the speech producer had in mind In producing and comprehending a text be it spoken or written the interlocutors collaborate towards coherence They negotiate for a common ground of shared topicality reference and thematic structure thus toward a similar mental representation of the text In conversation the negotiation takes place between the present participants In writing or oral narrative the negotiation takes place in the mind of the text producer between the text producer and his/her mental representation of the mind of the absent or inactive interlocutor The cognitive mechanisms that underlie face to face communication thus continue to shape text production and comprehension in non interactive contexts Most of the papers in this volume were originally presented at the Symposium on Coherence in Spontaneous Text held at the University of Oregon in the spring of 1992

Patterns of Text Mike Scott, Geoff Thompson, 2001-02-27 It is increasingly clear that in order to understand language as a phenomenon we must understand the phenomenon of text Our primary experience of language comes in the form of texts which embody the complete communicative events through which our language using lives are lived These events are shaped by communicative needs and this shaping is reflected in certain characteristic patterns in the texts However the nature of texts and text is still elusive we know which forms are typically found in text but we do not yet have a full grasp of how they constitute its textuality how they make a text tick The twelve contributions to this volume show how texts across a wide range of text types hold together by different patterns of chunking and linking The common purpose in all the contributions is to explore the nature of text patterning as the functional environment within which language operates

Cognitive Linguistics Investigations June Luchjenbroers, 2006-06-01 The total body of papers presented in this volume captures research across a variety of languages and language groups to show how particular elements of linguistic description draw on otherwise separate aspects or fields of linguistic investigation As such this volume captures a diversity of research interest from the field of cognitive linguistics These areas include lexical semantics cognitive grammar metaphor prototypes pragmatics narrative and discourse computational and translation models and are considered within the contexts of language change child language acquisition language and culture grammatical features and word order and gesture Despite possible differences in philosophical approach to the role of language in cognitive tasks these papers are similar in a fundamental way they all share a commitment to the view that human categorization involves mental concepts that have fuzzy boundaries and are culturally and situation based
