Collected mathematical papers Nathan Jacobson,1965 **Collected Mathematical Papers: 1965-1988** Nathan Jacobson,1989 **The Book of Involutions** Max-Albert Knus,1998 Written for graduate students and research mathematicians this monograph is an exposition of the theory of central simple algebras with involution in relation to linear algebraic groups Involutions are viewed as twisted forms of hermitian quadrics leading to new developments on the model of the algebraic theory of quadratic forms In addition to classical groups phenomena related to triality are discussed as well as groups of type F4 or G2 arising from exceptional Jordan or composition algebras the discriminant algebra of an algebra with unitary involution and the algebra theoretic counterpart to linear groups of type D4 Annotation copyrighted by Book News Inc Portland OR **Mathematical Reviews** ,1991 **Introduction to the Modern Theory of Dynamical Systems** Anatole Katok,A. B. Katok,Boris Hasselblatt,1995 This book provided the first self contained comprehensive exposition of the theory of dynamical systems as a core mathematical discipline closely intertwined with most of the main areas of mathematics The authors introduce and rigorously develop the theory while providing researchers interested in applications with fundamental tools and paradigms The book begins with a discussion of several elementary but fundamental examples These are used to formulate a program for the general study of asymptotic properties and to introduce the principal theoretical concepts and methods The main theme of the second part of the book is the interplay between local analysis near individual orbits and the global complexity of the orbit structure The third and fourth parts develop the theories of low dimensional dynamical systems and hyperbolic dynamical systems in depth Over 400 systematic exercises are included in the text The book is aimed at students and researchers in mathematics at all levels from advanced undergraduate up [Subject Guide to Books in Print](#) ,2001 **Never a Dull Moment** Keith Kendig,2018 Hassler Whitney was a giant of twentieth century mathematics This biography paints a picture of him and includes dozens of revealing anecdotes Mathematically he had a rare detector that went off whenever he spotted a piece of mathematical gold and he would then draw countless pictures gradually forging a path from hunch to proof **Books in Print** ,1994 **The Space of Mathematics** Javier Echeverria,Andoni Ibarra,Thomas Mormann,2012-10-25 No detailed description available for The Space of Mathematics

Topics in Geometric Group Theory Pierre de la Harpe,2000-10-15 In this book Pierre de la Harpe provides a concise and engaging introduction to geometric group theory a new method for studying infinite groups via their intrinsic geometry that has played a major role in mathematics over the past two decades A recognized expert in the field de la Harpe adopts a hands on approach illustrating key concepts with numerous concrete examples The first five chapters present basic combinatorial and geometric group theory in a unique and refreshing way with an emphasis on finitely generated versus finitely presented groups In the final three chapters de la Harpe discusses new material on the growth of groups including a detailed treatment of the Grigorchuk group Most sections are followed by exercises and a list of problems and complements

enhancing the book's value for students problems range from slightly more difficult exercises to open research problems in the field An extensive list of references directs readers to more advanced results as well as connections with other fields
