Cradle Of Thought The:

The Cradle of Thought R. Peter Hobson, 2004 Imaginative and creative thought is what distinguishes humans from animals It is what defines us as Homo sapiens What it means to have thoughts and what gives us the remarkable capacity to think have been subjects of debate for centuries In *The Cradle of Thought* Peter Hobson presents a new and provocative theory about the nature and origins of uniquely human thinking A prevailing opinion on the acquisition of thought and language is that babies are born with pre programmed modules in the brain But this is too narrow and too simplistic an explanation Professor Hobson s radical view is that what gives us the capacity to think is the quality of a baby s exchanges with other people over the first 18 months of life As part and parcel of an intellectual revolution in the second year the child achieves new insight into the minds of itself and others Human thought language and self awareness are developed in the cradle of emotional engagement between infant and caregiver social contact has vital significance for mental development Professor Hobson draws on 20 years of clinical experience and academic research as a developmental psychologist psychiatrist and psychoanalyst He follows the thread of mental development over the first 18 months of a baby s life to describe and to explain the emergence of thinking he shares startling insights into mental development gained from his studies of autism and he shows how from infancy to adulthood disturbances of thinking may be rooted in troubled early relationships Finally he pinpoints tiny but momentous changes in the social relations of pre human primates from which human thought sprang In this fascinating and thought provoking book Peter Hobson shows how very early engagement with others fosters the child s growth out of the cradle of infancy and into the realm of human thought and culture *The Cradle of Thought* Peter Hobson, 2002-05-01 Peter Hobson a Professor of Developmental Psychopathology examines how thought develops in infants focussing on the subsequent differences in the quality of thinking between individuals and what this suggests about the place of thought in the history of evolution Hobson firmly refutes the notion that thinking is turned on by biologically pre determined modules in the brain arguing instead that it arises from the nature and quality of the relationship between parent and child in the first eighteen months of life This will be a controversial book not only in scientific circles but also in its contribution to the wider parenting IQ and nature nurture debates Accessible authoritative and extremely readable *Cradle of Thought* is a major work of popular science *The Pall Mall Magazine*, 1906 *MIND and LOVE: The Human Experience* Lloyd Fell, 2011-01-04 The new scientific paradigm of embodied mind or situated cognition is percolating into popular mind science but its fundamentals autopoiesis and structural coupling have never been thoroughly explained Combines the paradigm shift in biology initiated by Maturana and Varela with the recent rush of ideas in social neuroscience to create what hopes to be a refreshingly new explanation of the way our mind works in our everyday experience and reveals the most common blind spots in what we thought we knew about our mind These blind spots are spoiling our individual lives and harming our prospects for peaceful coexistence and care of our environment e.g the mistaken ideas that meaning is

transferable that decisions come from conscious awareness or that knowledge is a commodity The biological significance of love and the value of embracing uncertainty and respecting the unknown point to a very hopeful vision for our future This is a scientific explanation of mind leavened with process philosophy also invoking spirituality without any religious connotation
