A Promising Field Robert Jefferson Norrell, 1990 Norrell history U of Alabama presents a history of the College of Engineering U of Alabama from 1831 to 1987 Annotation copyright Book News Inc Portland Or *A Promising Field* Robert J. Norrell, *Remaking Dixie* Neil R. McMillen, 1997 Although the Civil War reconfigured Dixie in the half century since the end of World War II the American South has been massively changed again It is still an improbable mix of tradition and transition but the stereotype of a region with one party politics one crop agriculture white supremacy cultural insularity grinding poverty somnolent cotton towns and languorous rural landscapes has largely passed into history Possum Trot and Tobacco Road have been suburbanized and how have Walmarts As the regions s boosters insist the nations s number0one economic problem has joined the great booming sunbelt For good or for ill a new sense has been visited upon nearly every southern place What elements caused such striking change to the face of Dixie In this volume nine widely known specialists in the history and literature of the American South search for the origins of this sweeping regional transformation in the period of the Second World War These original essays address a cluster of related problems of enduring fascination for all those who wish to understand the ever changing ever abiding South Offering new answers to important questions they address the Second World War as a major watershed in southern history Did it drive old Dixie down Did it set in motion forces that ultimately shaped a Newer South Did it further Americanize the South by eroding traditional patterns of thought and deed that once were fiercely defended by white southerners as our way of life Was the postwar South less different less peculiar and distinctive The Making of an Engineer Lawrence P. Grayson, 1993 When did formal engineering education begin Even if we could shine a light into the murky shadows of prehistory a precise answer would no doubt be impossible All we know for sure is that engineering has been part of the driving intellectual energy of economic development and social change throughout the world for millennia Fortunately we have a much clearer picture of the origins of engineering education in the United States and Canada In fact the history of engineering education in North America is closely linked to the history of the ASEE itself when the Society was founded in 1893 formal education was just becoming universally accepted as the means for entry into engineering practice Now for the first time Lawrence P Grayson has compiled a fascinating chronicle of the growth of the Society and its context in world events of the past 100 years Through stunning archival photographs and documents *The Making of an Engineer* presents an invaluable visual record of the evolution of engineering education in the United States and Canada Throughout the book Grayson underscores the strong historical link between the development of economic and social trends and their impact on engineering education This often tension filled relationship has been the fertile soil from which engineering has grown and evolved to meet the changing needs of society Grayson shows how engineers have adapted and flourished in the face of each major historical development of the last 100 years and how these changes have been reflected in the evolution of engineering education This magnificent chronicle celebrates the

centennial of the ASEE What finer tribute can there be than this graphic evidence of the Society's role in forging an unparalleled standard of excellence in the education of engineers

The Mechanical Feature C. James Haug, 1992 When Mississippi Agricultural and Mechanical College now Mississippi State University was founded in 1878 it was lacking what President Stephen D Lee called the mechanical feature Devoted entirely to offering coursework in general education and agriculture the college was not able to provide students with courses in technical subjects until 1891 when the curriculum began to include courses in basic woodworking and metal machining Electrical engineering was added in 1892 and in later years departments of civil industrial petroleum biological aerospace and nuclear engineering were developed as the demand arose and resources became available Today the MSU college of engineering is nationally acclaimed as a research center for the study of magnetohydrodynamics computer assisted fluid flow modeling and composite materials In 1990 it was named a National Science Foundation Research Center This volume tracing illustrious history of the college of engineering focuses upon several themes First is its struggle to gain adequate funding and to survive in a rural state that showed little sympathy for industry A second theme focuses on the problems of developing a curriculum and research program The dilemma of conforming to national accreditation standards and accommodating the demands of Mississippians for practical education stirred long term debates A third theme involves a study of the intricacies in administering higher education in Mississippi This history of engineering education at MSU is one of the few books that examine the development of an engineering college at a mid sized institution Almost all others have focused upon large well funded schools It is also the first full scale history to detail the internal development of an academic unit in Mississippi This is a book for engineering educators friends alumni of Mississippi State University and the College of Engineering and historians of technology
