Science and the Practice of Medicine in the Nineteenth Century W. F. Bynum,1994-05-27 Prior to the nineteenth century the practice of medicine in the Western world was as much art as science But argues W F Bynum modern medicine as practiced today is built upon foundations that were firmly established between 1800 and the beginning of World War I He demonstrates this in terms of concepts institutions and professional structures that evolved during this crucial period

applying both a more traditional intellectual approach to the subject and the newer social perspectives developed by recent historians of science and medicine In a wide ranging survey Bynum examines the parallel development of biomedical sciences such as physiology pathology bacteriology and immunology and of clinical practice and preventive medicine in nineteenth century Europe and North America Focusing on medicine in the hospitals the community and the laboratory Bynum contends that the impact of science was more striking on the public face of medicine and the diagnostic skills of doctors than it was on their actual therapeutic capacities *Current Catalog* National Library of Medicine (U.S.),1992 First multi year cumulation covers six years 1965 70

A History of Water in Modern England and Wales John Hassan,1998

Fragmenting modernism is about Ford Madox Ford a hero of the modernist literary revolution Ford is a fascinating and fundamental figure of the time not only because as a friend and critic of Ezra Pound and Joseph Conrad editor of the *English Review* and author of *The Good Soldier* he shaped the development of literary modernism But as the grandson of Ford Madox Brown and son of a German music critic he also manifested formative links with mainland European culture and the visual arts In Ford there is the chance to explore continuity in artistic life at the turn of the century as well as the more commonly identified pattern of crisis in the time The argument throughout is that modernism possesses more than one face Setting Ford in his cultural and historical context the opening chapter debates the concept of fragmentation in modernism later chapters discuss the notion of the personal narrative and war writing Ford s literary technique is studied comparatively and plot summaries of his major books *The Good Soldier* and *Parade s End* are provided as is a brief biography

Fragmenting Modernism will be useful for anyone studying the literature of the early twentieth century impressionism or modernism in general terms as well as for those who seek to investigate in detail one of the great polymorphous figures of the time

Bay Cities and Water Politics Sarah S. Elkind,1998

Combining insights from urban western and environmental history

Elkind examines the ways that people's reactions to their natural surroundings drive both demand for improved public services and political reform. She traces public works development in the Gilded Age and Progressive Era to explain how these programs united each city with its suburban neighbors, creating new political entities and allowing Boston and Oakland to appropriate rural resources and thus overcome the environmental limits to their continued growth and prosperity. She also shows how when the power of regionalism is turned to urban development, environmental and social costs are sometimes overlooked.

The British Experience with River Pollution, 1865-1876 Lawrence E. Breeze, 1993. This book provides a historical account of two Royal Commissions in Victorian Britain that sought solutions to river pollution problems attributed to industrial waste and town sewage. It describes and analyzes the legislative outcome, the Rivers Pollution Act of 1876, which remained the basic law until 1951. An introductory chapter and an epilogue place developments of the 1860s and 1870s into the broader context of British history. The study dispels any notion that environmental issues are largely twentieth-century phenomena. Two themes recur in the general response to the work of the commissions: fear of the economic consequences of adopting anti-pollution measures and a stubborn attachment to local control.

Public Baths and Washhouses in Victorian Britain, 1842-1914 Joseph R. Skoski, 2000

Public Science and Public Policy in Victorian England Roy M. MacLeod, 1996. This book comprises nine essays selected from Roy MacLeod's work on the social history of Victorian science and is concerned with the analysis of science as a responsibility and opportunity for 19th-century statecraft. It illuminates the origins of environmental regulation, the creation of scientific inspectorates, the reform of scientific institutions, and the association of government with the patronage and support of fundamental research. Above all, it explores several of the ways in which British scientists became statesmen in disguise, negotiating interests and professional goals by association with the interests of the state as provider and agent of efficiency in education and in the application of research.
