A Shared Table:

Multi Tenancy for Cloud-Based In-Memory Column Databases Jan Schaffner, 2013-07-03 With the proliferation of Software as a Service SaaS offerings it is becoming increasingly important for individual SaaS providers to operate their services at a low cost This book investigates SaaS from the perspective of the provider and shows how operational costs can be reduced by using multi tenancy a technique for consolidating a large number of customers onto a small number of servers Specifically the book addresses multi tenancy on the database level focusing on in memory column databases which are the backbone of many important new enterprise applications For efficiently implementing multi tenancy in a farm of databases two fundamental challenges must be addressed i workload modeling and ii data placement The first involves estimating the shared resource consumption for multi tenancy on a single in memory database server The second consists in assigning tenants to servers in a way that minimizes the number of required servers and thus costs based on the assumed workload model This step also entails replicating tenants for performance and high availability This book presents novel solutions to both problems
