Block Designs: A Randomization Approach Tadeusz Calinski, Sanpei Kageyama, 2012-12-06 The book is composed of two volumes each consisting of five chapters In Volume I following some statistical motivation based on a randomization model a general theory of the analysis of experiments in block designs has been developed In the present Volume II the primary aim is to present methods of that satisfy the statistical requirements described in constructing block designs Volume I particularly those considered in Chapters 3 and 4 and also to give some catalogues of plans of the designs Thus the constructional aspects are of predominant interest in Volume II with a general consideration given in Chapter 6 The main design investigations are systematized by separating the material into two contents depending on whether the designs provide unit efficiency factors for some contrasts of treatment parameters Chapter 7 or not Chapter 8 This distinction in classifying block designs may be essential from a practical point of view In general classification of block designs whether proper or not is based here on efficiency balance EB in the sense of the new terminology proposed in Section 4.4 see in particular Definition 4.4.2 Most of the attention is given to connected proper designs because of their statistical advantages as described in Volume I particularly in Chapter 3 When all contrasts are of equal importance either the class of $v \geq 1, 0 \leq EB$ designs is e

Block Designs: A Randomization Approach Tadeusz Calinski, Sanpei Kageyama, 2000-09-14 This book will be of interest to mathematical statisticians and biometricians interested in block designs The emphasis of the book is on the randomization approach to block designs After presenting the general theory of analysis based on the randomization model in Part I the constructional and combinatorial properties of design are described in Part II The book includes many new or recently published materials

Methods of Randomization in Experimental Design Valentim R. Alferes, 2012-10-01 In *Methods of Randomization in Experimental Design* author Valentim R Alferes presents the main procedures of random assignment and local control in between subjects experimental designs and the counterbalancing schemes in within subjects or cross over experimental designs Alferes uses a pedagogical strategy that allows the reader to implement all randomization methods by relying on the materials given in the appendices and using common features included in most word processor software A companion website at www.sagepub.com/alferes provides downloadable IBM SPSS and R versions of SCRAED a package that performs simple and complex random assignment in experimental design including the 18 randomization methods presented in Chapters 2 and 3
