Blue Laser:

The Blue Laser Diode Shuji Nakamura, Stephen Pearton, Gerhard Fasol, 2013-04-17 Shuji Nakamura's development of a blue semiconductor laser on the basis of GaN opens the way for a host of new applications of semiconductor lasers. The wavelengths can be tuned by controlling the composition. For the first time it is possible to produce lasers with various wavelengths ranging from red through yellow and green to blue in one substrate material. This fact together with their high efficiency makes GaN based lasers very useful for a wide spectrum of applications. The second edition of this basic book on GaN based devices has been updated and significantly extended. It includes a survey of worldwide research on GaN as well as Nakamura's latest important developments. The reader finds a careful introduction to the physics and properties of GaN. The main part of the book deals with the production and characteristics of GaN LDs and LEDs. To complete the spectrum of applications GaN power devices are also described.

Nonlinear Optics and Solid-State Lasers Jianquan Yao, Yuyue Wang, 2012-01-14 This book covers the complete spectrum of nonlinear optics and all solid state lasers. The book integrates theory, calculations and practical design, technology, experimental schemes and applications. With the expansion and further development of laser technology the wavelength spectrum of lasers had to be enlarged even to be tunable which requires the use of nonlinear optical and laser tunable technology. It systematically summarizes and integrates the analysis of international achievements within the last 20 years in this field. It will be helpful for university teachers, graduate students as well as engineers.

The Blue Laser Diode Shuji Nakamura, Gerhard Fasol, 2013-04-17

Shuji Nakamura s development of commercial light emitters from Gallium Nitride and related materials has recently propelled these materials into the mainstream of interest It is very rare that a breakthrough of such proportion can be converted so quickly into successful commercial products One factor for this success is Shuji Nakamura s hard work another factor is Nichia s enlightened founder Chairman and joint owner Nobuo Ogawa without whom Nakamura probably could not have done this work other factors are Professor Pankove s and Professor Akasaki s pioneering work The amazing speed of GaN breakthroughs caused an information gap There is much less information available on GaN than on silicon or GaAs and most current semiconductor text books do not even mention Gallium Nitride One of the aims of the present book is to close this information gap another important aim is to provide a report on the development of Gallium Nitride based light emitters and lasers and their properties Both aims are rapidly moving targets recent results near the end of the book even report that InGaN lasers might become the first commercial lasers using self assembled quantum dots
