techniques in their own pursuits Every effort has been made to avoid an abstruse presentation It should be clear that one individual cannot be expert in all the disciplines considered here and the authors recognize that fact with sincere humility As may be expected of an introductory reference most of our attention was focused on the commonly used methods To balance this we have included a few examples of approaches which are promising but relatively undeveloped at this time Also an emphasis has been placed on element selectivity It is impossible to envision the course of future events and a volume which deals with instrumentation is especially prone to become outdated Nevertheless any valid approach to a scientific question should be applicable indefinitely
