Although much attention has been given to the use of learning styles in the general curriculum and in teaching students to read, their use in the middle school classroom has received limited attention. The purpose of this book is to address the requirements of mathematics instruction through the use of learning styles-based instruction. The authors discuss the effective use of multiple methods in teaching concepts covered by all grade levels, offer numerous ways to develop spatial reasoning skills in students and provide activities which access multiple learning styles. Learning styles-based instruction is a powerful strategy which teachers can and should use. Teaching will be more effective, there will be less remediation and the overall mathematics curriculum will be greatly enhanced.
