## **A Profile Of Mathematical Logic:**

*A Profile of Mathematical Logic* Howard DeLong, 2012-09-26 This introduction to mathematical logic explores philosophical issues and Gödel's Theorem. Its widespread influence extends to the author of Gödel Escher Bach whose Pulitzer Prize winning book was inspired by this work. [A Profile of Mathematical Logic](#) Howard DeLong, 2004 [Notes Toward a Profile of Mathematical Logic](#) Howard DeLong, Trinity College (Hartford, Conn.), 1968 *Perspectives on the History of Mathematical Logic* Thomas Drucker, 2009-05-21 This volume offers insights into the development of mathematical logic over the last century. Arising from a special session of the history of logic at an American Mathematical Society meeting the chapters explore technical innovations, the philosophical consequences of work during the period and the historical and social context in which the logicians worked. The discussions herein will appeal to mathematical logicians and historians of mathematics as well as philosophers and historians of science. This is an important book. It exposes the richness of ideas and viewpoints, the difficult and not always direct pathways taken in the development of mathematical logic in the last century and the various factors which did and continue to affect that development. **Modern Logic** **Ω-Bibliography of**

**Mathematical Logic** Wolfgang Rautenberg, 1987-06-16 Gert H Müller. The growth of the number of publications in almost all scientific areas as in the area of mathematical logic is taken as a sign of our scientifically minded culture but it also has a terrifying aspect. In addition, given the rapidly growing sophistication, specialization and hence subdivision of logic, researchers, students and teachers may have a hard time getting an overview of the existing literature, particularly if they do not have an extensive library available in their neighbourhood. They simply do not even know what to ask for. More specifically, if someone vaguely knows that something vaguely connected with his interests exists somewhere in the literature, he may not be able to find it even by searching through the publications scattered in the review journals. Answering this challenge was and is the central motivation for compiling this Bibliography. The Bibliography comprises presently the following six volumes listed with the corresponding Editors: I Classical Logic W Rautenberg II Non classical Logics W Rautenberg III Model Theory H D Ebbinghaus IV Recursion Theory P G Hinman V Set Theory A R Blass VI Proof Theory Constructive Mathematics J E Kister D van Dalen A S Troelstra *Reports on Mathematical Logic*, 2002 **Scientific American**, 1909 **The Four Simple Ideas** Einar Jacobsen, 1986 **Encyclopedia of Science and Religion**, 2003 Publisher description: How do the latest medical developments affect our beliefs in faith's healing power? Can artificial intelligence compare with human consciousness? Are genetic engineers interfering with Nature's work? This reference work deals with these questions and others, examining the issues and the history associated with the complex relationship between science and religion. Articles by scientists of many fields, philosophers and thinkers from all the major world religions present a variety of perspectives on the major scientific discoveries of our time and their effects on our religious belief system.
