

Title

Philippine National Construction Corp. vs. Pabion

Case

G.R. No. 131715

Decision Date

Dec 7, 1999

The Supreme Court affirms the jurisdiction of the Securities and Exchange Commission (SEC) over the Philippine National Construction Corporation (PNCC) and government-owned and controlled corporations (GOCCs), ruling that the SEC can compel PNCC to hold a stockholders' meeting and determine the corporate status of a corporation.

377 Phil. 1019

THIRD DIVISION

[G.R. No. 131715, December 08, 1999]

PHILIPPINE NATIONAL CONSTRUCTION CORPORATION, PETITIONER, VS. ERNESTO PABION AND LOUELLA RAMIRO, RESPONDENTS.

D E C I S I O N

PANGANIBAN, J.:

The Securities and Exchange Commission (SEC) has jurisdiction over corporations organized pursuant to the Corporation Code, even if the majority or controlling shares are owned by the government. Hence, it can competently order the holding of a shareholders' meeting for the purpose of electing the corporate board of directors. While the SEC may not have authority over government corporations with original charters or those created by special law, it does have jurisdiction over "acquired asset corporations" as defined in AO 59. Specifically, the Philippine National Construction Company (PNCC) may be ordered by SEC to hold a shareholders' meeting to elect its board of directors in accordance with its Articles of Incorporation and By-Laws as well as with the Corporation Code. The chairman and the members of the PNCC Board of Directors hold office by virtue of their election by the shareholders, not by their appointment thereto by the President of the Republic.

A Ruling Pabion:

Reports of Cases Adjudged in the Court of Chancery of New York, 1887 *The Many Valued and Nonmonotonic Turn in Logic* Dov M. Gabbay, John Woods, 2007-08-13 The present volume of the Handbook of the History of Logic brings together two of the most important developments in 20th century non classical logic These are many valuedness and non monotonicity On the one approach in deference to vagueness temporal or quantum indeterminacy or reference failure sentences that are classically non bivalent are allowed as inputs and outputs to consequence relations Many valued dialethic fuzzy and quantum logics are among other things principled attempts to regulate the flow through of sentences that are neither true nor false On the second or non monotonic approach constraints are placed on inputs and sometimes on outputs of a classical consequence relation with a view to producing a notion of consequence that serves in a more realistic way the requirements of real life inference Many valued logics produce an interesting problem Non bivalent inputs produce classically valid consequence statements for any choice of outputs A major task of many valued logics of all stripes is to fashion an appropriately non classical relation of consequence The chief preoccupation of non monotonic and default logicians is how to constrain inputs and outputs of the consequence relation In what is called left non monotonicity it is forbidden to add new sentences to the inputs of true consequence statements The restriction takes notice of the fact that new information will sometimes override an antecedently and reasonably derived consequence In what is called right non monotonicity limitations are imposed on outputs of the consequence relation Most notably perhaps is the requirement that the rule of introduction not be given free sway on outputs Also prominent is the effort of paraconsistent logicians both preservationist and dialethic to limit the outputs of inconsistent inputs which in classical contexts are wholly unconstrained In some instances our two themes coincide Dialethic logics are a case in point Dialethic logics allow certain selected sentences to have as a third truth value the classical values of truth and falsity together So such logics also admit classically inconsistent inputs A central task is to construct a right non monotonic consequence relation that allows for these many valued and inconsistent inputs *The Many Valued and Non Monotonic Turn in Logic* is an indispensable research tool for anyone interested in the development of logic including researchers graduate and senior undergraduate students in logic history of logic mathematics history of mathematics computer science AI linguistics cognitive science argumentation theory and the history of ideas Detailed and comprehensive chapters covering the entire range of modal logic Contains the latest scholarly discoveries and interpretative insights that answers many questions in the field of logic **Alasdair Urquhart on Nonclassical and Algebraic Logic and Complexity of Proofs** Ivo Düntsch, Edwin Mares, 2021-09-24 This book is dedicated to the work of Alasdair Urquhart The book starts out with an introduction to and an overview of Urquhart s work and an autobiographical essay by Urquhart This introductory section is followed by papers on algebraic logic and lattice theory papers on the complexity of proofs and papers on philosophical logic and history of logic The final section of the book

contains a response to the papers by Urquhart Alasdair Urquhart has made extremely important contributions to a variety of fields in logic He produced some of the earliest work on the semantics of relevant logic He provided the undecidability of the logics R of relevant implication and E of relevant entailment as well as some of their close neighbors He proved that interpolation fails in some of those systems Urquhart has done very important work in complexity theory both about the complexity of proofs in classical and some nonclassical logics In pure algebra he has produced a representation theorem for lattices and some rather beautiful duality theorems In addition he has done important work in the history of logic especially on Bertrand Russell including editing Volume four of Russell s Collected Papers Effects of Acid Rain United States.
