Cultures in Motion Daniel T. Rodgers,Bhavani Raman,Helmut Reimitz,2017-05-09 In the wide ranging and innovative essays of Cultures in Motion a dozen distinguished historians offer new conceptual vocabularies for understanding how cultures have trespassed across geography and social space From the transformations of the meanings and practices of charity during late antiquity and the transit of medical knowledge between early modern China and Europe to the fusion of Irish and African dance forms in early nineteenth century New York these essays follow a wide array of cultural practices through the lens of motion translation itinerancy and exchange extending the insights of transnational and translocal history Cultures in Motion challenges the premise of fixed stable cultural systems by showing that cultural practices have always been moving crossing borders and locations with often surprising effect The essays offer striking examples from early to modern times of intrusion translation resistance and adaptation These are histories where nothing dance rhythms alchemical formulas musical practices feminist aspirations sewing machines streamlined metals or labor networks remains stationary In addition to the editors the contributors are Celia Applegate Peter Brown Harold Cook April Masten Mae Ngai Jocelyn Olcott Mimi Sheller Pamela Smith and Nira Wickramasinghe

Goodwyn,2012-03-15 Where does science end and religion begin Can spiritual images and feelings be understood on a neurobiological level without dismissing their power and mystery In this book psychiatrist Erik Goodwyn addresses these questions by reviewing decades of research putting together a compelling argument that the emotional imagery of myth and dreams can be traced to our deep brain physiology and importantly how a sensitive look at this data reveals why mythic or religious symbols are indeed more godlike than we might have imagined The Neurobiology of the Gods weaves together Jungian depth psychology with research in evolutionary psychology neuroanatomy cognitive science neuroscience anthropology mental imagery dream research and metaphor theory into a comprehensive model of how our brains contribute

to the recurrent images of dreams myth religion and even hallucinations Divided into three sections this book provides definitions and foundations an examination of individual symbols conclusive thoughts on how brain physiology shapes the recurring images that we experience Goodwyn shows how common dream myth and religious experiences can be meaningful and purposeful without discarding scientific rigor The Neurobiology of the Gods will therefore be essential reading for Jungian analysts and psychologists as well as those with an interest in philosophy anthropology and the interface between science and religion
