Angelic Space:

Sequential and Angelic Properties of Function Spaces Heinz König, 1987 *Topological Vector Spaces and Their Applications* V.I. Bogachev, O.G. Smolyanov, 2017-05-16 This book gives a compact exposition of the fundamentals of the theory of locally convex topological vector spaces Furthermore it contains a survey of the most important results of a more subtle nature which cannot be regarded as basic but knowledge which is useful for understanding applications Finally the book explores some of such applications connected with differential calculus and measure theory in infinite dimensional spaces These applications are a central aspect of the book which is why it is different from the wide range of existing texts on topological vector spaces Overall this book develops differential and integral calculus on infinite dimensional locally convex spaces by using methods and techniques of the theory of locally convex spaces The target readership includes mathematicians and physicists whose research is related to infinite dimensional analysis

Topological Fixed Point Theory for Singlevalued and Multivalued Mappings and Applications Afif Ben Amar, Donal O'Regan, 2016-05-04 This is a monograph covering topological fixed point theory for several classes of single and multivalued maps The authors begin by presenting basic notions in locally convex topological vector spaces Special attention is then devoted to weak compactness in particular to the theorems of Eberlein, Mulsant, Grothendieck and Dunford-Pettis Leray-Schauder alternatives and eigenvalue problems for decomposable single valued nonlinear weakly compact operators in Dunford-Pettis spaces are considered in addition to some variants of Schauder-Krasnoselskii-Sadovskii and Leray-Schauder type fixed point theorems for different classes of weakly sequentially continuous operators on general Banach spaces The authors then proceed with an examination of Sadovskii-Furi-Pera and Krasnoselskii fixed point theorems and nonlinear Leray-Schauder alternatives in the framework of weak topologies and involving multivalued mappings with weakly sequentially closed graph These results are formulated in terms of axiomatic measures of weak noncompactness The authors continue to present some fixed point theorems in a nonempty closed convex subset of any Banach algebra or Banach algebra satisfying a sequential condition P for the sum and the product of nonlinear weakly sequentially continuous operators and illustrate the theory by considering functional integral and partial differential equations The existence of fixed points nonlinear Leray-Schauder alternatives for different classes of nonlinear weakly compact operators weakly condensing 1-set weakly contractive strictly quasi-bounded defined on an unbounded closed convex subset of a Banach space are also discussed The authors also examine the existence of nonlinear eigenvalues and eigenvectors as well as the surjectivity of quasibounded operators Finally some approximate fixed point theorems for multivalued mappings defined on Banach spaces Weak and strong topologies play a role here and both bounded and unbounded regions are considered The authors explicate a method developed to indicate how to use approximate fixed point theorems to prove the existence of approximate Nash equilibria for non-cooperative games Fixed point theory is a powerful and fruitful tool in modern mathematics and may be considered as a core subject in nonlinear analysis In the last 50 years fixed point theory has

been a flourishing area of research As such the monograph begins with an overview of these developments before gravitating towards topics selected to reflect the particular interests of the authors

Banach Space Theory Marián Fabian, Petr Habala, Petr Hájek, Vicente Montesinos, Václav Zizler, 2011-02-04 Banach spaces provide a framework for linear and nonlinear functional analysis operator theory abstract analysis probability optimization and other branches of mathematics This book introduces the reader to linear functional analysis and to related parts of infinite dimensional Banach space theory Key Features Develops classical theory including weak topologies locally convex space Schauder bases and compact operator theory Covers Radon Nikod m property finite dimensional spaces and local theory on tensor products Contains sections on uniform homeomorphisms and non linear theory Rosenthal s L1 theorem fixed points and more Includes information about further topics and directions of research and some open problems at the end of each chapter Provides numerous exercises for practice The text is suitable for graduate courses or for independent study Prerequisites include basic courses in calculus and linear Researchers in functional analysis will also benefit for this book as it can serve as a reference book

Angelic Wisdom Concerning the Divine Love and Concerning the Divine Wisdom Emanuel Swedenborg, 1883

Descriptive Topology in Selected Topics of Functional Analysis Jerzy Kąkol, Wiesław Kubiś, Manuel López-Pellicer, 2011-08-30 Descriptive Topology in Selected Topics of Functional Analysis is a collection of recent developments in the field of descriptive topology specifically focused on the classes of infinite dimensional topological vector spaces that appear in functional analysis Such spaces include Frchet spaces LF spaces and their duals and the space of continuous real valued functions $C(X)$ on a completely regular Hausdorff space X to name a few These vector spaces appear in functional analysis in distribution theory differential equations complex analysis and various other analytical settings This monograph provides new insights into the connections between the topological properties of linear function spaces and their applications in functional analysis
