Animal Architecture And Building Behaviour:

Animal Architecture Michael Henry Hansell, 2005-01-27 Construction behaviour occurs across the entire spectrum of the animal kingdom and affects the survival of both builders and other organisms associated with them Animal Architecture provides a comprehensive overview of the biology of animal building The book recognizes three broad categories of built structure homes traps and courtship displays Even though some of these structures are complex and very large the behaviour required to build them is generally simple and the anatomy for building unspecialized Standardization of building materials helps to keep building repertoires simple while self organizing effects help create complexity In a case study approach to function insects demonstrate how homes can remain operational while they grow spiderwebs illustrate mechanical design and the displays of bowerbirds raise the possibility of persuasion through design rather than just decoration Studies of the costs to builders provide evidence of optimal designs and of trade offs with other life history traits As ecosystem engineers the influence of builders is extensive and their effect is generally to enhance biodiversity through niche construction Animal builders can therefore represent model species for the study of the emerging subject of environmental inheritance Building and in particular building with silk has been demonstrated to have important evolutionary consequences This book is intended for students and researchers in comparative animal biology but will also be of relevance and use to the increasing numbers of architects and civil engineers interested in developing ideas from the animal kingdom

Animal Architecture and Building Behaviour Michael Henry Hansell, 1984 *Built by Animals* Mike Hansell, 2007-10-18 From termite mounds that in relative terms are three times as tall as a skyscraper to the elaborate nests of social birds and the deadly traps of spiders the constructions of the animal world can amaze and at times humble our own engineering and technology But how do creatures with such small brains build these complex structures What drives them to do it Which skills are innate and which learned Here Mike Hansell looks at the extraordinary structures that animals build whether homes traps or courtship displays and reveals the biology behind their behaviour He shows how small brained animals achieve complex feats in a small brained way by repeating many simple actions and using highly evolved self secreted materials On the other hand the building feats or tool use of large brained animals such as humans or chimps require significantly more complex and costly behaviour We look at wasp s nests leaf cutting ants caddisflies and amoebae and even the extraordinary bower bird who seduces his mate with a decorated pile of twigs baubles feathers and berries Hansell explores how animal structures evolved over time how insect societies emerge how animals can alter their wider habitat and even whether some animals have an aesthetic sense

Animal Architects James L Gould, Carol Grant Gould, 2012-03-06 Animal behavior has long been a battleground between the competing claims of nature and nurture with the possible role of cognition in behavior as a recent addition to this debate There is an untapped trove of behavioral data that can tell us a great deal about how the animals draw from these neural strategies The structures animals build provide a superb window on the workings of the animal mind Animal Architects examines animal architecture across a range of species from those whose blueprints are largely innate such as spiders and their webs to those whose challenging structures seem to require intellectual insight planning and even aesthetics such as bowerbirds nests or beavers dams Beginning with instinct and the simple homes of solitary insects James and Carol Gould move on to conditioning the cognitive map and how it evolved and the role of planning and insight Finally they reflect on what animal building tells us about the nature of human intelligence showing why humans unlike many animals need to build castles in the air

Animal Architecture and Building Behaviour Michael Henry Hansell, 1984

Animal Architecture Paul Dobraszczyk, 2023-05-17 A provocative call for architects to remember and embrace the nonhuman lives that share our spaces A spider spinning its web in a dark corner Wasps building a nest under a roof There s hardly any part of the built environment that can t be inhabited by nonhumans and yet we are extremely selective about which animals we keep in or out This book imagines new ways of thinking about architecture and the more than human and asks how we might design with animals and the other lives that share our spaces in mind Animal Architecture is a provocative exploration of how to think about building in a world where humans and other animals are

Moore,2012-04-18

Many animals build shelters but only humans build homes No other species creates such a variety of dwellings Drawing examples from across the archaeological record and around the world archaeologist Jerry D Moore recounts the cultural development of the uniquely human imperative to maintain domestic dwellings He shows how our houses allow us to physically adapt to the environment and conceptually order the cosmos and explains how we fabricate dwellings and in the process construct our lives The Prehistory of Home points out how houses function as symbols of equality or proclaim the social divides between people and how they shield us not only from the elements but increasingly from inchoate fear
