Animal Cell Biotechnology:

Animal Cell Biotechnology Ralf Pörtner, 2007-04-05 The second edition of this book constitutes a comprehensive manual of new techniques for setting up mammalian cell lines for production of biopharmaceuticals and for optimizing critical parameters for cell culture considering the whole cascade from lab to final production The chapters are written by world renowned experts and the volume s five parts reflect the processes required for different stages of production This book is a compendium of techniques for scientists in both industrial and research laboratories that use mammalian cells for biotechnology purposes

Animal Cell Biotechnology Raymond Spier, R. E. Spier, J. B. Griffiths, 1994-11-14 There has been a dramatic increase in the perception of the value of animal cell biotechnology to the research and manufacturing communities in recent years This volume seeks to keep the reader up to date with this progress This sixth and final volume in the series concentrates on the biology of animal cells in culture giving special attention to the relationship between biology and the ability to use such cells productively As the search continues for greater productivity there is a need to understand the switches within cells that control expression Additional abilities to manipulate those switches in a controllable manner are also required In the last five years considerable progress has been made in the elucidation of the mechanisms for cell signaling and control of gene expression The 13 chapters of this volume are devoted to these subjects and to techniques in areas of particular concern in manufacturing circles The achievements in the field to date are described in this book which together with its five companion volumes in the series will provide a building block for the future development of animal cell biotechnology

Animal Cell Biotechnology Hansjörg Hauser, Roland Wagner, 2014-11-10 This book introduces fundamental principles and practical application of techniques used in the scalable production of biopharmaceuticals with animal cell cultures A broad spectrum of subjects relevant to biologics production and manufacturing are reviewed including the generation of robust cell lines a survey of functional genomics for a better understanding of cell lines and processes as well as advances in regulatory compliant upstream and downstream development The book is an essential reference for all those interested in translational animal cell based pharmaceutical biotechnology

Animal Cell Culture Mohamed Al-Rubeai, 2014-11-28 Animal cells are the preferred cell factories for the production of complex molecules and antibodies for use as prophylactics therapeutics or diagnostics Animal cells are required for the correct post translational processing including glycosylation of biopharmaceutical protein products They are used for the production of viral vectors for gene therapy Major targets for this therapy include cancer HIV arthritis cardiovascular and CNS diseases and cystic fibrosis Animal cells are used as in vitro substrates in pharmacological and toxicological studies This book is designed to serve as a comprehensive review of animal cell culture covering the current status of both research and applications For the student or R D scientist or new researcher the protocols are central to the performance of cell culture work yet a broad understanding is essential for translation of laboratory findings into the industrial production Within the broad scope of the book each topic

is reviewed authoritatively by experts in the field to produce state of the art collection of current research A major reference volume on cell culture research and how it impacts on production of biopharmaceutical proteins worldwide the book is essential reading for everyone working in cell culture and is a recommended volume for all biotechnology libraries
