**Animal Biotechnology** L.A. Babiuk, J.P. Phillips, Murray Moo-Young, 2013-10-22 The advent of biotechnology has the potential to develop a variety of novel or better quality products for the treatment of a large number of diseases in livestock In addition as we understand more about the reproductive physiology of animals the potential exists to dramatically increase the productivity of animals through better therapeutics and diagnostics for the control of many infectious diseases Productivity can also be increased through animal breeding strategies including gene transfer micromanipulation of embryos and gamete

sex selection As well as being a valuable reference to current knowledge in these areas this first supplement to Comprehensive Biotechnology also looks at societal concerns over the use of antibiotics and chemical residues in meat and milk products which are forcing biotechnologists to investigate more natural means of controlling infection by stimulating the animal's own immune system to combat infection The identification of a variety of cytokines which are involved in regulating immune responses provides opportunities to use the animal's natural defence mechanisms to combat many infections or increase the animal's resistance to such infections These approaches should provide tools for eventual elimination of specific diseases from counties regions or whole continents **ANIMAL BIOTECHNOLOGY** P. Biotechnology is a highly multidisciplinary subject and has got its foundation in many fields including biology microbiology biochemistry molecular biology genetics chemistry and chemical and processing engineering Application of biotechnology in medicine and agriculture has been a recent phenomenon Modern biotechnological processes now encompass a wide range of new products including antibiotics recombinant and nucleic acid vaccines monoclonal antibodies recombinant therapeutic products like recombinant insulin growth hormones prolactin and gene therapy production of transgenic animals and plants and use of embryo biotechnological methods and stem cells to augment animal production and human therapy respectively Animal biotechnology is in its infancy and only during the past ten years much work has been done in animal biotechnology in few isolated laboratories throughout the world There is an increasing need to train manpower in animal biotechnology Even though many colleges are offering courses in Biotechnology for the students there is no single text book available covering all the aspects of animal biotechnology for the students This book on Animal Biotechnology has been written to meet out the requirements of both undergraduate and postgraduate students on the subject of biotechnology There are seventeen chapters in this book covering different aspects of animal biotechnology including enzyme technology gene therapy biotechnology in medicine Intellectual Property Rights and biosafety in biotechnology Many up to date references on most of the topics have been included so that it would be a reference book for postgraduate students studying biotechnology and molecular biology This would be a useful book for students who are writing competitive examinations for fellowship With my extensive experience in teaching and research in Animal Biotechnology I have compiled this book to provide students the basic principles of animal biotechnology current information on different topics of biotechnology as well as information on Intellectual Property Rights and biosafety guidelines to be adopted in the laboratories **Animal Biotechnology** Lorne A. *Animals as Biotechnology* Richard Twine,2010 In *Animals as Biotechnology* sociologist Richard Twine places the question of human animal relations at the heart of sustainability and climate change debates The book is shaped by the emergence of two contradictory trends within our approach to nonhuman animals the biotechnological turn in animal sciences which aims to increase the efficiency and profitability of meat and dairy production and the emerging field of critical animal studies mostly in the humanities and social sciences which works to question the nature of our relations with other animals The first part of the book focuses on ethics examining critically the dominant paradigms of bioethics and power relations between human and non human The second part considers animal biotechnology and political economy examining commercialisation and regulation The final part of the book centres on discussions of sustainability limits and an examination of the prospects for animal ethics if biotechnology becomes part of the dominant agricultural paradigm Twine concludes by considering whether growing calls to reduce our consumption of meat dairy products in the face of climate change threats are in fact complicit with an anthropocentric understanding of sustainability and that what is needed is a more fundamental ethical and political questioning of relations and distinctions between humans animals and nature
