Horzinek, 1990 All the recognized experts from Europe U S A and Japan have contributed to make this book the most comprehensive up to date survey of animal models available for AIDS research It concerns animals which can be infected by the Human Immune deficiency Viruses both HIV 1 and HIV 2 such as chimpanzees rhesus monkeys rabbits SCID mice reconstituted with human cells and mice transgenic for HIV Information is also included on animals harbouring their own variants of HIV such as cats non human primates and bovines Other retrovirus models including lentivirus viruses like Equine Infectious Anemia Virus EIAV Visna Maedi Simian Retrovirus SRV and Feline Leukemia Virus FeLV are discussed The book also deals with the biohazard aspects of working with these viruses the comparative value of the models and their relation with AIDS in humans Examples of the applications of these models in the development of antiretroviral agents and vaccines are given Proceedings of the National Academy of Sciences of the United States of America, 2006 **Human Immunodeficiency Viruses and Human T-cell Lymphotropic Viruses** IARC Working Group on the Evaluation of Carcinogenic Risks to Humans, 1996 Evaluates the carcinogenic risk to humans posed by infections with human immunodeficiency viruses types 1 and 2 HIV 1 and HIV 2 and human T cell lymphotropic viruses types I and II HTLV I and HTLV II Although emphasis is placed on carcinogenicity assessment the monographs also provide richly detailed descriptions of the viruses genetic and structural features methods of detection routes of transmission geographical distribution of infection clinical manifestations of non neoplastic disorders and currently available methods of treatment and prevention For HIV infection the evaluation of studies of cancer in humans considers abundant evidence from case reports and epidemiological studies pointing to greatly increased incidences of Kaposi s sarcoma and non Hodgkin s lymphoma in persons infected with HIV 1 Data suggesting an association between HIV

infection and cervical anal and several other cancers are also carefully assessed Other data considered include findings from animal studies and investigations of the mechanisms by which immune dysfunction may contribute to the genesis of cancer On the basis of this evaluation the monograph concludes that infection with HIV 1 is carcinogenic to humans Infection with HIV 2 was classified as possibly carcinogenic to humans The second monograph provides a similarly detailed evaluation of human T cell lymphotropic viruses which are the only known human oncornavirinae Concerning studies of cancer in humans particular attention is given to evidence of an association between HTLV I and adult T cell leukemia lymphoma which occurs almost exclusively in areas where this infection is endemic In addition several case control studies have found an association between HTLV I seroprevalence and tumors of the vagina cervix and liver but confounding effects and bias could not be excluded The evaluation also considered findings from animal carcinogenicity studies and from investigations of the molecular mechanisms of leukemogenesis On the basis of this evaluation the monograph concludes that HTLV I is carcinogenic to humans HTLV II could not be classified as to its carcinogenicity to humans
