El cambio climático y el sector energético Diego

Fernando Otero Prada, 2023-06-16 Este libro presenta una discusión sobre temas que tienen que ver con el cambio climático y el sector energético centrado en Colombia y además se introducen discusiones sobre los modelos de desarrollo y la ecología El principal mensaje es que no se puede confundir a Colombia con el resto del mundo por las especificidades del país a diferencia de los países desarrollados El principal argumento es que en Colombia el sector eléctrico emite pocos gases de efecto invernadero un 4.5% del total mientras que el sector agropecuario y el uso del suelo explican 45% en especial la deforestación con un 20% De ahí que los esfuerzos deben dedicarse a los sectores donde se causan más emisiones de gases de efecto invernadero Se critica el énfasis en el sector eléctrico cuando aquí no está el problema ya que la generación de energía eléctrica es 70% producida por hidroeléctricas por lo cual centrarse en energía solar y eólica es exagerado Se argumenta que el país debe tener una política industrial basada en el sector energético para que no se siga dependiendo tecnológicamente del exterior cuando podría pensarse en tener fábricas de paneles solares y aerogenerador Enfatiza que hay que usar el potencial hidroeléctrico de Colombia que es enorme Se analiza el consumo de energía por sectores mostrando que se exagera también el efecto del sector transporte en las emisiones que explica el 15% de las mismas cuando en los países desarrollados es más del 30% y que la electrificación del transporte es un objetivo de décadas Define que hay que eliminar el consumo de combustible y de carbón en forma inteligente y sin causar desequilibrios económicos jurídicos y sociales Finaliza con un análisis de la compra de ISA empresa de transmisión de energía eléctrica de alto voltaje por Ecopetrol y desenmascara todos los argumentos equivocados que se dieron para justificar esta compra
