Macromedia Dreamweaver 8 with ASP, ColdFusion and PHP Jeffrey Bardzell, 2006. Learn by doing. Follow along step by step as you upgrade a static HTML site that uses obsolete code to an XML standard-compliant, CSS-formatted, dynamic site using Microsoft Active Server Pages (ASP), Macromedia ColdFusion, or the open-source PHP. Create several integrated applications for a fictional travel tour operator, including a searchable listing for tour descriptions, country profiles, and a tour price calendar. In this official Macromedia guide, you'll learn how to use a relational database, Microsoft Access or MySQL, as the driving force behind a site. Use Dreamweaver's built-in server behaviors and application objects to assist in the rapid development of dynamic Web applications. Read and hand-code ASP, VBScript, ColdFusion Markup Language, and PHP scripts well enough to understand how dynamic Web pages work, troubleshoot errors, and customize scripts. Collect and manipulate user-entered data, performing calculations on the fly. Use SQL to pass information between your pages and the database. Validate forms using client-side and server-side scripts.
