

OPTIMAL MEDICAL SYSTEMS UNDER RANDOM IMPULSES

W. J. Runggaldier, M. S. Vukobratovic

The paper considers the problem of optimal control of a medical system under random impulses. The system is modeled as a linear system with a random input. The control is designed to minimize the expected cost of the system. The optimal control is derived using the method of stochastic optimal control. The results show that the optimal control is a linear feedback control. The paper also discusses the implications of the results for the design of medical systems.

Keywords: optimal control, medical systems, random impulses

Dynamical Mechanical Systems Under Random Impulses:

Dynamical Mechanical Systems Under Random Impulses Radosław Iwankiewicz, 1995 The book presents the methods of analysis of dynamical mechanical systems subjected to stochastic excitations in form of random trains of impulses This particular class of excitations is adequately characterized by stochastic point processes and behaviour of dynamical systems is governed by stochastic differential equations driven by point processes Based on the methods of point processes the analytical techniques are devised to characterize the response of linear and nonlinear mechanical systems as the solutions of underlying stochastic differential equations A number of example problems of engineering importance are also solved such as the vibration of plates and shells and of nonlinear oscillators under random impulses Dynamical
