Electricity Transmission Pricing and Technology A.F. Kalverboer, A. Gramsbergen, 2001-11-30 The electric utility industry and its stakeholders in the United States appear to be at a critical juncture in time Powerful forces of global proportions are propelling the industry instinctively and in a secular fashion towards restructuring That the industry will change is a fait accompli The nature and timing of the change is still a matter of intense debate however Because of the evolution of the industry into its present day form i.e. regulated local monopolies in their designated franchise service territories the relative roles and expectations of various institutions would have to change to conform to the new state in the future In either encouraging or allowing this change to happen society is essentially saying that future societal welfare would be better served by the changed structure contemplated What that assumption translates into in more direct terms is that creation of future wealth would be better accomplished through redistribution of wealth today Thoughtful individuals recognize the enormous responsibility placed upon the various entities empowered with jurisdiction over the timing and nature of the structural change They are trying hard to bring analytical rigor to bear on the debate One very critical element of this debate on restructuring is the issue of the treatment of transmission The issue has been variously labeled transmission access or pricing Volumes have been written and spoken on this topic

Foraging Behavior A.C. Kamil, J.R. Drebs, H.R. Pulliam, 1987-05 Foraging behavior has always been a central concern of ecology Understanding what animals eat is clearly an essential component of understanding many ecological issues including energy flow competition and adaptation Theoretical and empirical developments in the late 1960s and 1970s led to a new emphasis in the study of foraging behavior the study of individual animals in both field and laboratory This development in turn led to an explosion of interest in foraging Part of the reason for this explosion is that when foraging is studied at the individual level it is relevant to many disciplines Behaviorists including ethologists and psychologists are interested in any attempt to understand behavior Ecologists know that a better understanding of foraging will contribute to resolving a number of important ecological issues Anthropologists and others are applying the ideas coming out of the study of foraging behavior to problems within their disciplines These developments led to a multidisciplinary symposium on foraging behavior held as part of the 1978 Animal Behavior Society meetings in Seattle Washington Many ecologists ethologists and psychologists participated or attended The symposium was very successful generating a high level of excitement As a result the participants decided to publish the proceedings of the symposium Kami1 Sargent 1981
