Instead of providing a macro analysis of large scale political and economic processes the book offers imaginative new ways of knowing and understanding globalization as a series of micro affects Digital art is explored in terms of how it re centers articulations of globalization around individual experiences and offers new ways of accessing a complex topic often expressed in general and intangible terms The Work of Art in a Digital Age Art Technology and Globalization is analytic and accessible with material that is of interest to a range of researchers from different disciplines Students studying digital art film globalization cultural studies or digital media trends will also find the content fascinating

Movement, Time, Technology, and Art Christina Chau, 2017-06-12 This book explores the ways in which artists use technology to create different perceptions of time in art in order to reflect on contemporary relationships to technology By considering the links between technology movement and contemporary art the book explores changing relationship between temporality in art art history media art theory modernity contemporary art and digital art This book challenges the dominant view that kinetic art is an antiquated artistic experiment and considers the changing perception of kinetic art by focusing on exhibitions and institutions that have recently challenged the notion of kinetic art as a marginalised and forgotten artistic experiment with mechanical media This is achieved by deconstructing Frank Popper's argument that kinetic art is a precursor to subsequent explorations in the intersections between art science and technology Rather than pandering to the prevailing art historical assumption that kinetic sculpture is merely a precursor to art in a digital culture the book proposes that perhaps kineticism succeeded too well where movement has become a ubiquitous element of the aesthetic of contemporary art If as Boris Groys has recently suggested installation has become the dominant mode of art in the contemporary age then movement in real time with the viewer is used to aestheticise and explore the facets of our peculiar time

Contract Ars Electronica 2023 is dedicated to the complex questions of truth and the concept of ownership in this digital age. In doing so, the festival navigates the central questions of our time. The focus is on how our perception of authentic and original is being transformed and whether truth can be owned and how this relates to digitalization and the rapidly developing performance of artificial intelligence. How can the achievements of a tool that is so much based on the globally collective raw material of knowledge and creativity be made accessible to everyone and be harnessed to the benefit of all? This comprehensive volume brings together the works of artists, scientists, developers, designers, entrepreneurs, and activists from around the world and delves deep into the themes of the festival, offering insights, perspectives, and thought-provoking content that reflect on the intersection of art, technology, and society.

High Techne R. L. Rutsky, 2014-05-28. In an age of high tech, our experience of technology has changed tremendously, yet the definition of technology has remained largely unquestioned. High Techne redresses this gap in thinking about technology, examining the shifting relations of technology, art, and culture from the beginnings of modernity to contemporary technocultures. Progressing from the major art movements of modernism to contemporary science fiction and cultural theory, Rutsky provides clear and compelling evidence of a shift in the cultural conceptions of technology and art.
