Dynamic Systems On Measure Chains:

Dynamic Systems on Measure Chains V. Lakshmikantham, S. Sivasundaram, B. Kaymakcalan, 2013-06-29 From a modelling point of view it is more realistic to model a phenomenon by a dynamic system which incorporates both continuous and discrete times namely time as an arbitrary closed set of reals called time scale or measure chain It is therefore natural to ask whether it is possible to provide a framework which permits us to handle both dynamic systems simultaneously so that one can get some insight and a better understanding of the subtle differences of these two different systems The answer is affirmative and recently developed theory of dynamic systems on time scales offers the desired unified approach In this monograph we present the current state of development of the theory of dynamic systems on time scales from a qualitative point of view It consists of four chapters Chapter one develops systematically the necessary calculus of functions on time scales In chapter two we introduce dynamic systems on time scales and prove the basic properties of solutions of such dynamic systems The theory of Lyapunov stability is discussed in chapter three in an appropriate setup Chapter four is devoted to describing several different areas of investigations of dynamic systems on time scales which will provide an exciting prospect and impetus for further advances in this important area which is very new Some important features of the monograph are as follows It is the first book that is dedicated to a systematic development of the theory of dynamic systems on time scales which is of recent origin It demonstrates the interplay of the two different theories namely the theory of continuous and discrete dynamic systems when imbedded in one unified framework It provides an impetus to investigate in the setup of time scales other important problems which might offer a better understanding of the intricacies of a unified study LIST Audience Thereadership of this book consists of applied mathematicians engineering scientists research workers in dynamic systems chaotic theory and neural nets

Method of Variation of Parameters for Dynamic Systems V. Lakshmikantham, 2019-09-10 Method of Variation of Parameters for Dynamic Systems presents a systematic and unified theory of the development of the theory of the method of variation of parameters its unification with Lyapunov's method and typical applications of these methods No other attempt has been made to bring all the available literature into one volume This book is a clear exposition of this important topic in control theory which is not covered by any other text Such an exposition finally enables the comparison and contrast of the theory and the applications thus facilitating further development in this fascinating field

Advances in Dynamic Equations on Time Scales Martin Bohner, Allan C. Peterson, 2002-12-06 Excellent introductory material on the calculus of time scales and dynamic equations Numerous examples and exercises illustrate the diverse application of dynamic equations on time scales Unified and systematic exposition of the topics allows good transitions from chapter to chapter Contributors include Anderson M Bohner Davis Dosly Eloe Erbe Guseinov Henderson Hilger Hilscher Kaymakcalan Lakshmikantham Mathsen and A Peterson founders and leaders

of this field of study Useful as a comprehensive resource of time scales and dynamic equations for pure and applied mathematicians Comprehensive bibliography and index complete this text

Theory of Translation Closedness for Time Scales Chao Wang, Ravi P. Agarwal, Donal O' Regan, Rathinasamy Sakthivel, 2020-05-05 This monograph establishes a theory of classification and translation closedness of time scales a topic that was first studied by S Hilger in 1988 to unify continuous and discrete analysis The authors develop a theory of translation function on time scales that contains piecewise almost periodic functions piecewise almost automorphic functions and their related generalization functions e g pseudo almost periodic functions weighted pseudo almost automorphic functions and more Against the background of dynamic equations these function theories on time scales are applied to study the dynamical behavior of solutions for various types of dynamic equations on hybrid domains including evolution equations discontinuous equations and impulsive integro differential equations The theory presented allows many useful applications such as in the Nicholson s blowflies model the Lasota Wazewska model the Keynesian Cross model in those realistic dynamical models with a more complex hybrid domain considered under different types of translation closedness of time scales and in dynamic equations on mathematical models which cover neural networks This book provides readers with the theoretical background necessary for accurate mathematical modeling in physics chemical technology population dynamics biotechnology and economics neural networks and social sciences

Journal of Dynamic Systems, Measurement, and Control ,2004 Publishes theoretical and applied original papers in dynamic systems Theoretical papers present new theoretical developments and knowledge for controls of dynamical systems together with clear engineering motivation for the new theory Applied papers include modeling simulation and corroboration of theory with emphasis on demonstrated practicality
