*A Background to Geometry* T. G. Room, 1967-12-02 The central theme of the book is the development of the idea of congruence that relation between geometric figures which is basic to ordinary Euclidean geometry The text is divided into four books corresponding to stages in the development of a geometrical system from simple axioms 1 Geometry without numbers the relations of order and sense 2 Geometry and counting properties of the systems obtained by repetitions of the operation of displacement 3 Geometry and algebra the consequences of adjoining new points to the system developed in Book 2 In particular the properties of an algebraic field are deduced from the geometric axioms 4 Congruence properties derived from the operation of reflexion An early introduction of parallels makes possible the drawing of diagrams which resemble those of Euclid's geometry so that the reader may see the broad outline of a proof from observable properties of these diagrams Particular geometrical systems are explored and some general topics investigated in detail in appendices following each section of the book
