Truth in Translation Jason David BeDuhn,2003-04-29 Written with the student and interested public in mind Truth in Translation aims to explain what is involved and what is at stake in Bible translation It begins with brief treatments of the background to the Bible and its translation the various approaches to translation and the specific origins of nine translation versions in wide use in the English speaking world today It then proceeds to compare those versions on nine points of translation ranging from individual terms to difficult passages to whole categories of grammar The book serves to inform readers of the forces at work shaping the meaning of the Bible to help in their selection of Bible translations and to act as a critical catalyst for the improvement of Bible translations through more careful attention to the risk of bias in the translation process A Dictionary of the Bible, Dealing with Its Language, Literature, and Contents, Including the Biblical Theology: Pleroma-Zuzim James Hastings,1902

Assessing the Accuracy of Google Translate to Allow Data Extraction from Trials Published in Non-English Languages U. S. Department of Health and Human Services,Agency for Healthcare Research and Quality,2013-03-21 One of the strengths of systematic reviews is that they aim to include all relevant evidence However study eligibility is often restricted to the English language for practical reasons Google Translate a free Web based resource

for translation has recently become available. However, it is unclear whether its translation accuracy is sufficient for systematic reviews. An earlier pilot study provided some evidence that data extraction from translated articles may be adequate but varies by language. To address several limitations of the pilot study, four collaborating Evidence-based Practice Centers conducted a more rigorous analysis of translations of articles from five languages. Systematic reviews conducted by the Agency for Healthcare Research and Quality (AHRQ) Evidence-based Practice Centers (EPCs) most commonly restrict literature searches to English language publications. In a sample of 10 recent Evidence Reports, numbers 189, 198, 8 were restricted to English language publications. One report included studies in languages for which the EPC had available fluency and only one reported not restricting by language. Among 28 other recent Comparative Effectiveness Reviews (CERs) with final or draft documents downloadable from the AHRQ Web site, 20 were restricted to English language publications. Four explicitly did not impose any language restriction. Two did not report language restriction in their methods chapter and included one study each in Dutch and German. One placed no language restriction on comparative studies but included only English language cohort studies. One included German and French language studies for nonoperative interventions which were sparse but only English language publications for operative treatments due to lack of translation resources. Three of the CERs wrote that the language restriction was due to lack of resources or prohibitive translation costs despite the recognition in one CER that requiring studies to be published in English could lead to bias. The current study was designed to form a collaboration of EPCs to better analyze the accuracy of the freely available online translation tool Google Translate for the purposes of data extraction of articles in selected non-English languages. The collaboration allowed for double data extraction and a better consensus determination of the important extraction items to assess. We also implemented an improved analytic technique. The research had the following aims:

1. Compare data extraction of trials done on original language articles by native speakers with data extraction done on articles translated to English by Google Translate.
2. Track and enumerate the time and resources used for article translation and the extra time and resources required for data extraction related to use of translated articles.

The Janus-Face of Language: Where Are the Emotions in Words and the Words in Emotions? Cornelia Herbert, Thomas Ethofer, Andreas J. Fallgatter, Peter Walla, Georg Northoff, 2018-09-28

Language has long been considered independent from emotions. In the last few years, however, research has accumulated empirical evidence against this theoretical belief of a purely cognitive-based foundation of language. In particular, through research on emotional word processing, it has been shown that processing of emotional words activates emotional brain structures, elicits emotional facial expressions, and modulates action tendencies of approach and avoidance, probably in a similar manner as processing of

non verbal emotional stimuli does In addition it has been shown that emotional content is already processed in the visual cortex in a facilitated manner which suggests that processing of emotional language content is able to circumvent in depth semantic analysis Yet this is only one side of the coin Very recent research putting words into context suggests that language may also construe emotions and that by studying word processing one can provide a window to one s own feelings All in all the empirical observations support the thesis of a close relationship between language and emotions at the level of word meaning as a specific evolutionary achievement of the human species As such this relationship seems to be different from the one between emotions and speech where emotional meaning is conveyed by nonverbal features of the voice But what does this relationship between written words and emotions theoretically imply for the processing of emotional information The present Research Topic and its related articles aim to provide answers to this question This book comprises several experimental studies investigating the brain structures and the time course of emotional word processing Included are studies examining the affective core dimensions underlying affective word processing and studies that show how these basic affective dimensions influence word processing in general as well as the interaction between words feelings and expressive behavior In addition new impetus comes from studies that on the one hand investigate how task sublexical and intrapersonal factors influence emotional word processing and on the other hand extend emotional word processing to the domains of social context and self related processing Finally future perspectives are outlined including research on emotion and language acquisition culture and multilingualism In summary this textbook offers scientists from different disciplines insight into the neurophysiological behavioral and subjective mechanisms underlying emotion and language interactions It gives new impulses to existing theories on the embodiment of language and emotion and provides new ways of looking at emotion cognition interactions
