oxidative stress in one disease and propose new diet related strategies to prevent such conditions arising in another unrelated disease Dietitians will prescribe new foods or diets containing antioxidants for conditions that are refractory by conventional pharmacological treatments Dietitians after learning about the basic biology of oxidative stress will be able to suggest new treatments to their multidisciplinary teams Nutritionists and dietitians will learn about cell signaling and will be able to suggest preventive or therapeutic strategies with antioxidant rich foods to reduce damage done by diseases involving abnormal cell signaling Research Resources Reporter ,1982 *Small Animal Clinical Endocrinology* ,1996
