Church Architecture:

Protestant Worship and Church Architecture James F. White, 2003-02-28 Each year a billion dollars is spent on church buildings in the United States Yet there is no authoritative book available to guide building committees ministers and others responsible for new churches in the theological implications of their work Dr White explores the theological and historical considerations relevant to building for Protestant worship Surprisingly these are often ignored by building committees usually with disastrous results His approach is highly original especially in his theological treatment of worship yet his book is also a operative in the largest sense in that it relates theology to practice Professor White begins with a critical analysis of contemporary concepts of Protestant worship and then defines the liturgical factors in church design Following this there are four chapters giving an historical account of various experiments from the third century to the present This section indicates the tremendous variety of possibilities open to the church builder many of which have been ignored too long A final chapter deals with emotive factors all vitally relevant to the architect choir liturgical art and style The opportunity to design a new church building occurs only once or twice in each generation of church members It is all the more important that it be done carefully since the building will continue to affect the life of the congregation for many years Until fundamental questions as to what the Church is and what the Church does in worship are raised a congregation is not prepared to build This book will help churches find the answers The 155 item bibliography should be of value to many since a recent extensive bibliography on Protestant church architecture does not exist This book also contains 60 diagrams of experiments in plan garnered from nearly 2000 years of history

Sacred Power, Sacred Space Jeanne Halgren Kilde, 2008-07-21 Jeanne Halgren Kilde s survey of church architecture is unlike any other Her main concern is not the buildings themselves but rather the dynamic character of Christianity and how church buildings shape and influence the religion Kilde argues that a primary function of church buildings is to represent and reify three different types of power divine power or ideas about God personal empowerment as manifested in the individual s perceived relationship to the divine and social power meaning the

relationships between groups such as clergy and laity Each type intersects with notions of Christian creed cult and code and is represented spatially and materially in church buildings Kilde explores these categories chronologically from the early church to the twentieth century She considers the form organization and use of worship rooms the location of churches and the interaction between churches and the wider culture Church buildings have been integral to Christianity and Kilde s important study sheds new light on the way they impact all aspects of the religion Neither mere witnesses to transformations of religious thought or nor simple backgrounds for religious practice church buildings are in Kilde s view dynamic participants in religious change and goldmines of information on Christianity itself
