Cutting Edge Technology Information Capitalism And Social Revolution:

Cutting Edge Jim Davis, Thomas Hirschl, Michael Stack, 1997 The rapid expansion of laborless production systems creates enormous instability Money previously paid in wages is spent on technology Workers lose jobs to robotic intelligence and therefore have no money to buy the goods produced by the technology CUTTING EDGE provides an up to the minute analysis of the complex relations between technology and work and how jobs and living standards can be protected *Democracy and New Media* Henry Jenkins, David Thorburn, Brad Seawell, 2004 Essays on the promise and dangers of the Internet for democracy **Critical Perspectives on the Internet** Greg Elmer, 2002 This critical reader of original essays places the boom and bust years of the Internet in a broad cultural context Exploring the world of html web browsers cookies online net guides portals and Internet service providers this text includes the history of the Internet interesting case studies and discussions on online community user inequalities and governance Within the larger issues of technological infrastructure government policy and globalization *Critical Perspectives on the Internet* highlights both the limitations and possibilities of everyday Internet use Does the net function as a space for radical social and political change For challenging established media What opportunities lie in the cracks and crevasses of net structure With its critical agenda for Internet studies this text is a valuable tool for upper level courses on the Internet online communication computer mediated communication communication and information technologies and media and politics *Structure and Agency in the Neoliberal University* Joyce E. Canaan, Wesley Shumar, 2008-05 This volume brings together a set of largely ethnographic articles written from a critical perspective that consider how current transitions in post secondary education are impacting on higher education HE institutions **Encoding Capital** Rodney Loeppky, 2013-09-13 This book deals with the rapid changes in contemporary molecular biology particularly genome sciences and the manner in which they can be understood through the lens of political economy Specifically the work investigates the case of the United States led Genome Project HGP in order to show that even large scale basic science is closely bound up in the progression of capitalist social relations The work has in part been motivated by the lack of rigorous analysis of the HGP Most the existing literature tends to present either a chronological review of events surrounding the HGP or describe it thematically In contrast this book contributes to a needed discussion concerning the why and how of the HGP emergence It elucidates the features within capitalist social relations which have simultaneously enable the HGP and ensure its amenability to systemic demands The work s most compelling elements are both historical and analytical Historically it places the HGP within the context of wider political economic and social issues Related to this it puts forward an analytical explanatory understanding of the project s emergence making it a valuable tool for both political economists science society theorists and even bioethicists **Education as Enforcement** Kenneth Saltman, David A. Gabbard, 2010-09-13 The first volume to focus on the intersections of militarization corporations and education *Education as Enforcement* exposed the many ways schooling has become the means through which the expansion

of global corporate power are enforced. Since publication of the first edition these trends have increased to disturbing levels as a result of the extensive militarization of civil society, the implosion of the neoconservative movement and the financial meltdown that radically called into question the basic assumptions undergirding neoliberal ideology. An understanding of the enforcement of these corporate economic imperatives remains imperative to a critical discussion of related militarized trends in schools, whether through accountability and standards, school security or other discipline based reforms. Education as Enforcement elaborates upon the central arguments of the first edition and updates readers on how recent events have reinforced their continued original relevance. In addition to substantive updates to several original chapters, this second edition includes a new foreword by Henry Giroux, a new introduction and four new chapters that reveal the most contemporary expressions of the militarization and corporatization of education. New topics covered in this collection include zero tolerance, foreign and second language instruction in the post 9/11 context, the rise of single sex classrooms and the intersection of the militarization and corporatization of schools under the Obama administration.

Corporations and Cultural Industries Scott W. Fitzgerald, 2011-12-28. Corporations and Cultural Industries. Time Warner Bertelsmann and News Corporation. By Scott Warren Fitzgerald provides an introduction to the political economy of international media corporations. This text fills a fundamental gap in the critical media studies field, expanding on the relative paucity of academic studies. To ground the discussion, Fitzgerald focuses on the growth of three specific media conglomerates: Time Warner, Bertelsmann and News Corporation. Adopting an approach rooted in critical political economy, the book explains the corporations' growth through an engagement with broader social theories, the wider conditions of capital accumulation, especially theories of corporate competition and financialization, issues of institutional logic and corporate strategies, and the role of states as regulators, mediators of opposed interests and facilitators of corporate expansion. The first section presents debates in social theory addressing issues that pertain to cultural industries and dimensions in which they both challenge and extend these wider social theories. The second section presents detailed case studies of the three contemporary media mega companies across the range of operations they coordinate both within and outside the cultural industries. By analyzing the specifics and complexities of different media industries, Corporations and Cultural Industries examines how financialization processes re-gear the internal operations of media corporations in a manner that pits one sector against another. This book provides an in-depth study that can be used as stand-alone teaching resources or as a valuable supplement to a variety of media courses.

Red Seminars Peter McLaren, 2005. Red Seminars is a collection of essays about the crisis of capitalism and democracy and its impact on education. A steadfast proponent of collective scholarship, renowned critical educator Peter McLaren is partnered in this volume with a new generation of radical scholars. The result is a timely study that moves critical pedagogy into new and urgent directions.

BOOK JACKET *Capitalism Rebooted?* Dave Broad, Wayne Andrew Antony, 2006. Investigating the effects of the New Economy on Canada's workers and their families, this study examines the promises made

by the advances of technology and globalization versus the challenges that face workers today The changes that have been made in the working world have not been the predicted boon for laborers the book explains leading instead to under and unemployment and a rehash of an old exploitative system

Cognitive Capitalism, Education, and Digital Labor Michael A. Peters, Ergin Bulut (Ed), 2011 Cognitive capitalism sometimes referred to as third capitalism after mercantilism and industrial capitalism is an increasingly significant theory given its focus on the socio economic changes caused by Internet and Web 2.0 technologies that have transformed the mode of production and the nature of labor The theory of cognitive capitalism has its origins in French and Italian thinkers particularly Gilles Deleuze and Felix Guattari's Capitalism and Schizophrenia Michel Foucault's work on the birth of biopower and Michael Hardt and Antonio Negri's Empire and Multitude as well as the Italian Autonomist Marxist movement that had its origins in the Italian operaismo workerism of the 1960s In this collection leading international scholars explore the significance of cognitive capitalism for education especially focusing on the question of digital labor

Cutting Edge Jim Davis, Thomas A. Hirschl, Michael Stack, 1997 A robot can build a car But a robot cannot buy a car The explosion in the development of computer and robot based manufacturing is seeing the rapid expansion of laborless production systems Such systems create enormous instability both for the overall world economy where money previously paid in wages is now invested in labor saving technology and therefore cannot be spent on goods and for workers whose jobs are being de skilled or are simply disappearing Bringing together contributions from workers employed in the new electronics and information industries with theorists in economics politics and science Cutting Edge provides an up to the minute analysis of the complex relations between technology and work Individual essays look at topics including the cyclical nature of a technologically driven economy the privatization of knowledge which new information industries demand the convergence of different economic sectors under the impact of digitalization and the strategies which trade unionists and governments might deploy to protect jobs and living standards Technology has the potential to end material scarcity and lay the foundations for higher forms of human fulfillment But under existing power structures it is more likely to exacerbate the poverty and misery under which most people live Cutting Edge weighs that balance and in helping us to understand how technology interacts with the production of goods and services tips it in the direction of a more equal and creative world

Creativity and the Global Knowledge Economy Michael A. Peters, Simon Marginson, Peter Murphy, 2009 This is a major work by three international scholars at the cutting edge of new research that investigates the emerging set of complex relationships between creativity design research higher education and knowledge capitalism It highlights the role of the creative and expressive arts of performance of aesthetics in general and the significant role of design as an underlying infrastructure for the creative economy This book tracks the most recent mutation of these serial shifts from postindustrial economy to the information economy to the digital economy to the knowledge economy to the creative economy to

summarize the underlying and essential trends in knowledge capitalism and to investigate post market notions of open source public space The book hypothesizes that creative economy might constitute an enlargement of its predecessors that not only democratizes creativity and relativizes intellectual property law but also emphasizes the social conditions of creative work It documents how these profound shifts have brought to the forefront forms of knowledge production based on the commons and driven by ideas not profitability per se and have given rise to the notion of not just knowledge management but the design of creative institutions embodying new patterns of work
