Abstract

The dynamics of cyclic feedback systems are described. The emphasis is both in showing the diversity of possible dynamics in these systems and in showing that there is a underlying dynamic structure possessed by all these systems. In particular, for the special class of monotone cyclic feedback systems, the dynamics is fairly simple; the recurrent sets can only consist of fixed points or periodic orbits and in many cases can be shown to be Morse-Smale. This is contrasted with the general cyclic feedback systems for which chaotic dynamics can occur.

The general properties which large subclasses of these systems have in common include periodic orbits and a semi-conjugacy onto a simple,

Cyclic Feedback Systems:

Cyclic Feedback Systems Tomáš Gedeon, 1998 Explores the global dynamics of a class of ordinary differential equations called cyclic feedback systems The global dynamics is described by a Morse decomposition of the global attractor defined with the help of a discrete Lyapunov function A three dimensional system of ODEs with two linear equations is constructed such that the invariant set is at least as complicated as a suspension of a full shift on two symbols No index Annotation copyrighted by Book News Inc Portland OR

A Systems Theoretic Approach to Systems and Synthetic Biology II: Analysis and Design of Cellular Systems Vishwesh V. Kulkarni, Guy-Bart Stan, Karthik Raman, 2014-07-03 The complexity of biological systems has intrigued scientists from many disciplines and has given birth to the highly influential field of systems biology wherein a wide array of mathematical techniques such as flux balance analysis and technology platforms such as next generation sequencing is used to understand elucidate and predict the functions of complex biological systems More recently the field of synthetic biology i e de novo engineering of biological systems has emerged Scientists from various fields are focusing on how to render this engineering process more predictable reliable

scalable affordable and easy Systems and control theory is a branch of engineering and applied sciences that rigorously deals with the complexities and uncertainties of interconnected systems with the objective of characterising fundamental systemic properties such as stability robustness communication capacity and other performance metrics Systems and control theory also strives to offer concepts and methods that facilitate the design of systems with rigorous guarantees on these properties Over the last 100 years it has made stellar theoretical and technological contributions in diverse fields such as aerospace telecommunication storage automotive power systems and others Can it have or evolve to have a similar impact in biology The chapters in this book demonstrate that indeed systems and control theoretic concepts and techniques can have a significant impact in systems and synthetic biology Volume II contains chapters contributed by leading researchers in the field of systems and synthetic biology that concern modeling physiological processes and bottom up constructions of scalable biological systems The modeling problems include characterisation and synthesis of memory understanding how homoeostasis is maintained in the face of shocks and relatively gradual perturbations understanding the functioning and robustness of biological clocks such as those at the core of circadian rhythms and understanding how the cell cycles can be regulated among others Some of the bottom up construction problems investigated in Volume II are as follows How should biomacromolecules platforms and scalable architectures be chosen and synthesised in order to build programmable de novo biological systems What are the types of constrained optimisation problems encountered in this process and how can these be solved efficiently As the eminent computer scientist Donald Knuth put it biology easily has 500 years of exciting problems to work on This edited book presents but a small fraction of those for the benefit of 1 systems and control theorists interested in molecular and cellular biology and 2 biologists interested in rigorous modelling analysis and control of biological systems
