Cyclic Phenomena For Composition Operators:

Cyclic Phenomena for Composition Operators Paul Bourdon, 1997 **Cyclic Phenomena for Composition Operators on Weighted Bergman Spaces** Anna Gori, 2001 Recent Advances in Operator Theory, Operator Algebras, and their Applications Dumitru Gaspar, Israel Gohberg, Dan Timotin, Florian H. Vasilescu, Laszlo Zsido, 2006-03-30 The Romanian conferences in operator theory as they are now commonly called have started in the year 1976 as an annual workshop on operator theory held at the University of Timi soara originally only with Romanian attendance The meeting soon evolved into an international conference with an increasingly larger participation It has been organized jointly initially by the Department of Mathematics of INCREST and by the Faculty of Sciences of the University of Timi soara then since 1990 by the Institute of Mathematics of the Romanian Academy and the Faculty of Mathematics of the West University of Timi soara The venue was usually Timi soara and occasionally Herculane Bucharest or Predeal Since 1986 the conference has been regularly held biannually at the beginning of the summer The 19th Conference on Operator Theory OT 19 took place between June 27th and July 2nd 2002 at the West University of Timi soara It is a pleasure to acknowledge the considerable financial support received through the programme EURROMMAT of the European Community under contract ICA1 CT 2000 70022 Partial support has also been provided by the Romanian Ministry of Education Research and Youth grants CERES 152 2001 and 153 2001 The full programme of the conference is included in the sequel It is worth mentioning also a special event that has taken place during the conference Professor Israel Gohberg has been awarded the title of Doctor Honoris Causa of the West University of Timi soara Trends in Banach Spaces and Operator Theory Anna Kamińska, 2003 This volume contains proceedings of the conference on Trends in Banach Spaces and Operator Theory which was devoted to recent advances in theories of Banach spaces and linear operators Included in the volume are 25 papers some of which are expository while others present new results The articles address the following topics history of the famous James theorem on reflexivity projective tensor products construction of noncommutative L_p spaces via interpolation Banach spaces with abundance of nontrivial operators Banach spaces with small spaces of operators convex geometry of Coxeter invariant polyhedra uniqueness of unconditional bases in quasi Banach spaces dynamics of cohyponormal operators and Fourier algebras for locally compact groupoids The book is suitable for graduate students and research mathematicians interested in Banach spaces and operator theory and their applications **Topics in Complex Analysis and Operator Theory** Oscar Blasco, 2012 This book contains the lecture notes as well as some invited papers presented at the Third Winter School in Complex Analysis Operator Theory and Applications held February 2 5 2010 in Valencia Spain The book is divided into two parts The first is an extended self contained version of the mini courses taught at the School The papers in this first part are Notes on real analytic functions and classical operators by Pawel Domanski Shining a Hilbertian lamp on the bidisk by John E McCarthy Selected problems in perturbation theory by Vladimir V Peller

and Composition operators on Hardy Orlicz spaces by Luis Rodriguez Piazza The second part consists of several research papers on recent advances in the area and some survey articles of an expository character The articles in this second part are Remarks on weighted mixed norm spaces by O Blasco Interpolation subspaces of L^1 of a vector measure and norm inequalities for the integration operator by J M Calabuig J Rodriguez and E A Sanchez Perez On the spectra of algebras of analytic functions by D Carando D Garcia M Maestre and P Sevilla Peris Holomorphic self maps of the disk intertwining two linear fractional maps by M D Contreras S Diaz Madrigal M J Martin and D Vukotic ABC type estimates via Garsia type norms by K M Dyakonov and Volterra type operators on Bergman spaces with exponential weights by J Pau and J A Pelaez The topics selected for the mini courses cover several aspects of complex analysis and operator theory that play important roles in understanding connections between different areas that are considered in fashion these days This part is aimed at graduate students and young researchers The courses are self contained focusing on those aspects that are basic and that can lead the readers to a quick understanding of the theories presented in each topic They start with the classical results and reach a selection of open problems in each case The research and survey articles are aimed at young researchers in the area as well as post doc and senior researchers interested in complex analysis and operator theory This book is published in cooperation with Real Sociedad Matematica Espanola

Operators, Functions, and Systems - An Easy Reading Nikolai K.

Nikolski,2010-10-06 Together with the companion volume by the same author Operators Functions and Systems An Easy Reading Volume 1 Hardy Hankel and Toeplitz Mathematical Surveys and Monographs Vol 92 AMS 2002 this unique work combines four major topics of modern analysis and its applications A Hardy classes of holomorphic functions B Spectral theory of Hankel and Toeplitz operators C Function models for linear operators and free interpolations and D Infinite dimensional system theory and signal processing This volume contains Parts C and D Function models for linear operators and free interpolations This is a universal topic and indeed is the most influential operator theory technique in the post spectral theorem era In this book its capacity is tested by solving generalized Carleson type interpolation problems Infinite dimensional system theory and signal processing This topic is the touchstone of the three previously developed techniques The presence of this applied topic in a pure mathematics environment reflects important changes in the mathematical landscape of the last 20 years in that the role of the main consumer and customer of harmonic complex and operator analysis has more and more passed from differential equations scattering theory and probability to control theory and signal processing This and the companion volume are geared toward a wide audience of readers from graduate students to professional mathematicians They develop an elementary approach to the subject while retaining an expert level that can be applied in advanced analysis and selected applications

Function Spaces Krzysztof Jarosz,1999 This proceedings volume presents 36 papers given by leading experts during the Third Conference on Function Spaces held at Southern Illinois University at Edwardsville A wide range of topics in the subject area are covered Most papers are written for nonexperts so the book can serve as a good introduction to the topic for those interested in this area The book presents the following broad range of topics including spaces and algebras of analytic functions of one and of many variables L_p spaces spaces of Banach valued functions isometries of function spaces geometry of Banach spaces and related subjects Known results open problems and new discoveries are featured At the time of publication information about the book the conference and a list and pictures of contributors are available on the Web at www.siu.edu/MATH/conference.htm

Linear Chaos Karl-G. Grosse-Erdmann,Alfred Peris Manguillot,2011-08-24 It is commonly believed that chaos is linked to non linearity however many even quite natural linear dynamical systems exhibit chaotic behavior The study of these systems is a young and remarkably active field of research which has seen many landmark results over the past two decades Linear dynamics lies at the crossroads of several areas of mathematics including operator theory complex analysis ergodic theory and partial differential equations At the same time its basic ideas can be easily understood by a wide audience Written by two renowned specialists Linear Chaos provides a welcome introduction to this theory Split into two parts part I presents a self contained introduction to the dynamics of linear operators while part II covers selected largely independent topics from linear dynamics More than 350 exercises and many illustrations are included and each chapter contains a further Sources and Comments section The only prerequisites are a familiarity with metric spaces the basic theory of Hilbert and Banach spaces and

fundamentals of complex analysis More advanced tools only needed occasionally are provided in two appendices A self contained exposition this book will be suitable for self study and will appeal to advanced undergraduate or beginning graduate students It will also be of use to researchers in other areas of mathematics such as partial differential equations dynamical systems and ergodic theory
