Atlas of Clinical Positron Emission Tomography 2nd Edition Sally Barrington, 2005-11-25 Positron Emission Tomography PET is now firmly established as an invaluable technique for diagnosing and monitoring disease The second edition of this comprehensive clinical atlas will continue to present the combined experience of two of the world's leading PET centres as the technique has moved on from its formative years to gain established value in clinical practice The book has been substantially rewritten to take account of the exciting developments that are occurring with the introduction of PET CT and new in neuropsychiatry cardiology and infection A useful additional feature is the accompanying DVD Rom with HERMES RAPID software which contains PET CT cases for viewing and analysis with cross modality image fusion and has been provided by Hermes Medical Solutions Atlas of Clinical Positron Emission Tomography is an invaluable resource for nuclear medicine specialists radiologists and oncologists both in training and in practice

Chemical Reactor Modeling Hugo A. Jakobsen, 2014-04-02 Chemical Reactor Modeling closes the gap between Chemical Reaction Engineering and Fluid Mechanics The second edition consists of two volumes Volume 1 Fundamentals Volume 2 Chemical Engineering Applications In volume 1 most of the fundamental theory is presented A few numerical model simulation application examples are given to elucidate the link between theory and applications In volume 2 the chemical reactor equipment to be modeled are described Several engineering models are introduced and discussed A survey of the frequently used numerical methods algorithms and schemes is provided A few practical engineering applications of the modeling tools are presented and discussed The working principles of several experimental techniques employed in order to get data for model validation are outlined The monograph is based on lectures regularly taught in the fourth and fifth years graduate courses in transport phenomena and chemical reactor modeling and in a post graduate course in modern reactor modeling at the Norwegian University of Science and Technology Department of Chemical Engineering Trondheim Norway The objective of the book is to present the fundamentals of the single fluid and multi fluid models for the analysis of single and multiphase reactive flows in chemical reactors with a chemical reactor engineering rather than mathematical bias Organized into 13 chapters it combines theoretical aspects and practical applications and covers some of the recent research in several areas of chemical reactor engineering This book contains a survey of the modern literature in the field of chemical reactor modeling

Exploring Cancer Metabolic Reprogramming through Molecular Imaging Franca Podo, Zaver M. Bhujwala, Egidio Iorio, 2017-07-27 The inclusion of oncogene driven reprogramming of energy metabolism within the list of cancer hallmarks Hanahan and Weinberg Cell 2000 2011 has provided major impetus to further investigate the existence of a much wider metabolic rewiring in cancer cells which not only includes deregulated cellular bioenergetics but also encompasses multiple links with a more comprehensive network of altered biochemical pathways This network is currently held responsible for redirecting carbon and phosphorus fluxes through the biosynthesis of nucleotides amino acids lipids and phospholipids and

for the production of second messengers essential to cancer cells growth survival and invasiveness in the hostile tumor environment The capability to develop such a concerted rewiring of biochemical pathways is a versatile tool adopted by cancer cells to counteract the host defense and eventually resist the attack of anticancer treatments Integrated efforts elucidating key mechanisms underlying this complex cancer metabolic reprogramming have led to the identification of new signatures of malignancy that are providing a strong foundation for improving cancer diagnosis and monitoring tumor response to therapy using appropriate molecular imaging approaches In particular the recent evolution of positron emission tomography PET magnetic resonance spectroscopy MRS spectroscopic imaging MRSI functional MR imaging fMRI and optical imaging technologies combined with complementary cellular imaging approaches have created new ways to explore and monitor the effects of metabolic reprogramming in cancer at clinical and preclinical levels Thus the progress of high tech engineering and molecular imaging technologies combined with new generation genomic proteomic and phosphoproteomic methods can significantly improve the clinical effectiveness of image based interventions in cancer and provide novel insights to design and validate new targeted therapies The Frontiers in Oncology Research Topic Exploring Cancer Metabolic Reprogramming Through Molecular Imaging focusses on current achievements challenges and needs in the application of molecular imaging methods to explore cancer metabolic reprogramming and evaluate its potential impact on clinical decisions and patient outcome A series of reviews and perspective articles along with original research contributions on humans and on preclinical models have been concertedly included in the Topic to build an open forum on perspectives present needs and future challenges of this cutting edge research area
